ITT

Amazing things happen

When great things connect

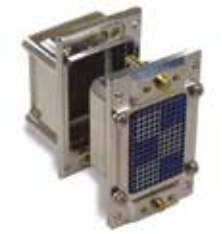

ITT Cannon is a leading global manufacturer of connector products serving international customers in the aerospace and defense, industrial and medical end markets.

Whether delivering critical specs to aircraft pilots, streaming data through communications satellites or enabling ultrasound equipment to give expectant parents a first look at their unborn child, ITT Cannon connects the world's most important information to the people who need it.

More than a Century of Connections

Since 1915, Cannon products have been used in a history of "firsts. "From the first "talking" movie to the first man on the moon, Cannon has set the standard for reliable, harsh environment interconnect solutions." Today we proudly continue our legacy of innovation with a goal to connect the world and inspire the successes of the next century - because amazing things happen when great things connect.

About ITT

ITT is a diversified leading manufacturer of highly engineered critical components and customized technology solutions for the transportation, industrial, and energy markets. Building on its heritage of innovation, ITT partners with its customers to deliver enduring solutions to the key industries that underpin our modern way of life. ITT is headquartered in Stamford, Connecticut, with employees in more than 35 countries and sales in approximately 125 countries.

Meet Some of Our Most Popular Connectors 124

Introduction: Rack & Panel Connector Solutions

Designed for exceptional performance in harsh environments, ITT Cannon's Rack & Panel interconnect solutions are manufactured to the highest quality and reliability standards for the aerospace & defense industry. At ITT Cannon, our legacy of innovation and expertise in the design and engineering of Rack & Panel connectors has established industry and competitive benchmarks for decades. From our environment-resistant DPK interconnect, which was designed into nearly every U.S. space flight and mission flown during the 1960s, to the groundbreaking expansion of Rack & Panel Connectors with the introduction of our innovative BKAD/E Series in the 1970s, ITT Cannon has achieved significant milestones.

Today, we are recognized as an industry leader in rectangular Rack & Panel interconnect solutions, offering an unparalleled range of off-the-shelf and custom products to align with customer needs. Our latest is the BKA ARINC 600 Rack & Panel with ARINC 801 ASR, an integral part of our end-to-end ARINC 801 Fiber Optic Series for commercial and military aviation. Now and in the future, we remain committed to manufacturing the most reliable, high performance and cost-effective Rack & Panel connectors available to meet the demands of a dynamic marketplace. Because at ITT Cannon, amazing things happen when great things connect.

Learn more about our **world-class manufacturing processes, facilities and RoHS compliance** on page 121 or visit ittcannon.com

Our tradition of engineering excellence continues with the **BKA Rack & Panel Connector with ARINC 801 ASR**. Designed for use in harsh environment applications that require quick and accurate data transfer such as In-Flight Entertainment/Connectivity, this innovative fiber optic interconnect solution supports transmission speeds of 10 gigabits/sec (Gb/S) or more. Built for optimum performance in the most extreme conditions, the BKA Rack & Panel Connector with ARINC 801 ASR delivers signals, video and data when it matters most. See page 11 for more details or visit ittcannon.com

BKA (ARINC 600)

Product Overview

BKA connectors represent the standard for Avionic systems developed to support the Air Transportation market. They are blind mate connectors designed per ARINC 600. These connectors are available in 3 and 6 gang configurations and can accommodate up to 800 low insertion force contacts. The inserts are field replaceable. BKA connectors are available in environmental and non-environmental versions.

BKAC	BKAD/E	BKAF/X
Rear Release/Rear Removable Size 12, 16, 20, 22 Crimp Contacts BKAC is a combination of BKAD (no environmental O-ring) with inserts not potted into the shell. BKAE in which dielectric inserts have a wire seal in the grommet on the rear surface.	Rear Release/Rear Removable Size 12, 16, 20, 22 Crimp Contacts BKAD/E connectors represent the standard for new avionic systems developed to support the air transportation market. Several important design concerns have been addressed and solved in this new series. High mating forces of pluggable modules in a rack have been reduced by approximately two-thirds. The low insertion force contacts are also interchangeable with the contacts used in the DPX series and permit retrofit of existing equipment.	Front Release/Front Removable Size 22 Solder Tail and Wrap Post Contacts This new connector is totally intermateable and intermountable with ARINC 600 connectors now in the field. The BKAF permits the user to easily replace a contact in case of problems, rather than disassemble the entire connector--it is available with size 22 contacts in wrap post or solder-tail versions. The system maintains the advantages of low insertion force technology incorporated in all ARINC 600 connectors. BKAX contacts are front release and front removable

- Low insertion force contacts
- Both environmental and non- environmental versions
- Polarizing posts that are removable from the mating face
- Field replaceable inserts for size 22 and power contacts
- Up to 800 size 22 contacts in one connector
- Crimp, coax, power, printed circuit and wire wrapable post style contacts
- Uses standard DPX crimp, insertion/extraction tooling
- Waveguide connections available

BKA (ARINC 600)

How to Order

Product	**BKA (Per ARINC 600)**	BKA	R	D	2	-	A234	M	-	3	00	01*	-	F0
RoHS Version: (Optional)	R -	RoHS Compliant Finish: Trivalent Chromate												
Class:	C -	Same as E, except uses BKAD shells and Less O-rings on plug side												
	D -	Non-Environmental (rear release, crimp contacts)												
	E -	Environmental (rear release, crimp contacts)												
	F -	Receptacle only - Non-environmental (front release, solder and wrap post #22 contact, all others are rear release)												
	PF -	Plug only - Non-environmental (front release, solder and wrap post #22 contact, all others are rear release)												
	T -	Non-environmental connector using filtered contacts. See ITT Filter Connector catalog for further details. (Reference only)												
	X -	Receptacle only - All contacts are front release, for PCB Applications only												
	PX -	Plug only - All contacts are front release, for PCB Applications only												
		ARINC 600 Original Mating Forces												
Shell Size:	1 -	Max. contact capacity - 125 — 27 lbs *												
	2 -	Max. contact capacity - 400 — 60 lbs *												
	3 -	Max. contact capacity - 800 — 105 lbs *												
Connector Layout Description:		See Pages 12-16 for Connector Layouts												
Size 1 Coax Insert Modifier:	M -	Connector contains modified 71W1 or 2W2 insert (four Mounting screw hole locations and coaxial contact used in this insert are interchangeable between other manufacturers												
Shell Style:	3 -	Plug (Rack side)												
	4 -	Receptacle (Box side)												
Connector Mounting Modifier:		See Page 9 for Connector Mounting Modifiers												
Polarizing Position:	01 -	See Polarization chart on Page 22 for Position 01 through 216 (per ARINC 600)												
	00 -	00 for polarization indicates that polarizing hardware is not supplied (i.e., BKAD2-313-30000) Blank or no position indicated means - Polarizing posts or keys not installed but supplied with connector (i.e., BKAD2-313-300)												
Modifier (Contact, Finish, Material):	F0 -	See Page 10 for Modifiers (Contact, Finish, Material)												

ANY OTHER COMBINATION OF INSERTS WITHIN A SPECIFIC SHELL IS AVAILABLE UPON REQUEST: For additional layouts, consult your account representative.

BKA (ARINC 600)

How to Order (continued)

Connector Mounting Modifier

00 -	PLUG AND RECEPTACLE CONNECTORS .148 dia. connector mounting holes. This is a Standard Configuration.
01 -	PLUG AND RECEPTACLE CONNECTORS With #6 (.138) - 32 ESNA clinch nuts (See Table for quantities)
02 -	SIZE 1 RECEPTACLE CONNECTORS ONLY Standard Configuration with three PWB mounting lugs machined off.
03 -	PLUG AND RECEPTACLE CONNECTORS With #4 (.112) - 40 ESNA clinch nuts (See Table for quantities)
04 -	SIZE 1 RECEPTACLE CONNECTORS ONLY With four #6 (.138) - 32 ESNA clinch nuts. Modified shell - three PWB mounting lugs machined off and O/A length of flange shortened to 6.980. (See Table for quantities)
06 -	SIZE1 PLUG CONNECTOR ONLY With #6 (.138) - 32 ESNA clinch nuts (See Table for quantities) and with side mounting lugs machined off. (See Table for quantities)
08 -	SIZE 2 AND 3 PLUG AND RECEPTACLE CONNECTORS ONLY With #4 (.112) - 40 ESNA clinch nuts in all connector mounting holes (See Table for quantities)
09 -	SIZE 2 AND 3 PLUG AND RECEPTACLE CONNECTORS ONLY With #6 (.138) - 32 ESNA clinch nuts in all connector mounting holes (See Table for quantities)
17 -	RECEPTACLE CONNECTOR ONLY Standard Configuration with .0008-.0012 thick nickel plated die cast shell. The shell is provided without an EMI/grounding spring.
22 -	PLUG CONNECTORS ONLY Standard Configuration with .0008-.0012 thick nickel plated shell. The shell is provided with an EMI/Grounding spring. Metallic inserts, if supplied, are selectively plated - I.D. Silver; O.D. Nickel over Silver. The contact retaining/grounding clips are gold plated.
23 -	PLUG AND RECEPTACLE CONNECTORS With floating eyelets (.048 min. radial float) in four corner connector mounting holes.
25 -	RECEPTACLE CONNECTORS ONLY 01 mod with #6 (.138) - 32 ESNA clinch nuts and .0008-.0012 thick nickel plated shell. (See Table for quantities)
33 -	PLUG CONNECTORS ONLY Standard Configuration with .0008-.0012 thick nickel plated shell, but without EMI/Grounding springs.
37 -	PLUG AND RECEPTACLE CONNECTORS With metric clinch nuts M3 X 6 (See Table for quantities)
38 -	PLUG CONNECTORS ONLY With metric clinch nuts M3 X 6 (See Table for quantities) and with .0008-.0012 thick nickel plated shell. The shell is provided with an EMI/ Grounding spring. Metallic inserts, if supplied, are selectively plated - I.D. Silver; O.D. Nickel over Silver. The contact retaining/ grounding clips are gold plated.
45 -	RECEPTACLE CONNECTOR ONLY Standard Configuration with .0008-.0012 thick nickel plated die cast shell. The shell is provided without an EMI/grounding spring.
46 -	PLUG AND RECEPTACLE CONNECTORS .148 dia. connector mounting holes. SURTEC 650V ROHS Compliant plating.
47 -	PLUG AND RECEPTACLE CONNECTORS Surtec 650V Plating-With #4 (.112) - 40 ESNA clinch nuts
48 -	PLUG AND RECEPTACLE CONNECTORS Electroless Nickel plated shells with 4-40 clinch nuts in all connector mounting holes (See Table for quantities)
50 -	PLUG CONNECTORS ONLY-SIZE 1 ONLY Standard Configuration with .0008-.0012 thick nickel plated die cast shell and EMI springs.
51 -	PLUG CONNECTORS ONLY-SIZE 1 ONLY Standard Configuration with .0008-.0012 thick nickel plated die cast shell and EMI springs and all holes with #6-32 clinch nuts
52 -	PLUG CONNECTORS ONLY-SIZE 2 AND 3 ONLY Standard Configuration with .0008-.0012 thick nickel plated die cast shell and EMI springs and #6-32 clinch nuts in all places.
53 -	PLUG CONNECTORS ONLY-SIZE 2 AND 3 ONLY Standard Configuration with .0008-.0012 thick nickel plated die cast shell and EMI springs and #6-32 clinch nuts except in center holes.
54 -	PLUG CONNECTORS ONLY-SIZE 2 AND 3 ONLY Standard Configuration with .0008-.0012 thick nickel plated die cast shell and EMI springs with #6-32 clinch nuts (4 places).
55 -	PLUG CONNECTORS ONLY-SIZE 2 AND 3 ONLY Standard Configuration with .0008-.0012 thick nickel plated die cast shell and EMI springs and all holes with #6-32 clinch nuts (6 places).
56 -	PLUG CONNECTORS ONLY-SIZE 2 AND 3 ONLY Standard Configuration with .0008-.0012 thick nickel plated die cast shell and EMI springs and #4-40 clinch nuts in all places.
57 -	PLUG CONNECTORS ONLY-SIZE 2 AND 3 ONLY Standard Configuration with .0008-.0012 thick nickel plated die cast shell and EMI springs and #6-32 clinch nuts (8 places no center hole clinch nuts).
58 -	PLUG CONNECTORS ONLY-SIZE 1 ONLY Standard Configuration with .0008-.0012 thick nickel plated die cast shell and EMI springs. With floating eyelets (.048 min. radial float) in four corner connector mounting holes.

BKA (ARINC 600)

How to Order (continued)

Modifier (Contact, Finish, Material)

BKAC/BKAD/BKAE/BKAF/BKAX

BLANK -	Rear release, crimp, signal and power contacts supplied with connector (when applicable)
F0 -	Contacts not supplied with connector (F0 not stamped on connector)
F00 -	Less contacts and waveguide (F00 not stamped on connector)

BKAF - Signal contacts (size 22) are front release, front removable with solder post termination. Power contacts are rear release, rear removable with crimp termination.

SE -	Front release solder PCB contacts installed .150 (3.81). (Coax, Triax, and Quadrax does not have contacts installed)
SF -	Front release solder PCB contacts installed .250 (6.35). (Coax, Triax, and Quadrax does not have contacts installed)
SG -	Front release solder PCB contacts installed .375 (9.53). (Coax, Triax, and Quadrax does not have contacts installed)
SH -	Front release solder PCB contacts installed .500 (12.7). (Coax, Triax, and Quadrax does not have contacts installed)
WA -	Front release .025(0.63) Sq. x .250 (6.35) (1 wrap) wrap post and crimp, rear release power contacts (when applicable) supplied with connector
WB -	Front release .025(0.63 Sq. x .375 (9.53) (2 wraps) wrap post and crimp, rear release power contacts (when applicable) supplied with connector

Stamped Contacts - Receptacle Side Only

STE* -	Stamped PCB contacts installed .150 (3.81). (Coax, Triax, and Quadrax does not have contacts installed)
STF -	Stamped PCB contacts installed .250 (6.35). (Coax, Triax, and Quadrax does not have contacts installed)
STG -	Stamped PCB contacts installed .375 (9.53). (Coax, Triax, and Quadrax does not have contacts installed)
STH* -	Stamped PCB contacts installed .500 (12.7). (Coax, Triax, and Quadrax does not have contacts installed)

BKAX - Signal contacts (size 22) are front release, front removable with solder post termination. Power contacts are front release, front removable with solder post termination.

SS-	Front release solder PCB contacts installed .150 (3.81) including Coax, Triax, and Quadrax. All contacts to be PCB.
ST -	Front release solder PCB contacts installed .250 (6.35) including Coax, Triax, and Quadrax. All contacts to be PCB.
SU -	Front release solder PCB contacts installed .375 (9.53) including Coax, Triax, and Quadrax. All contacts to be PCB.
SV -	Front release solder PCB contacts installed .500 (12.7) including Coax, Triax, and Quadrax. All contacts to be PCB.
SW -	Front release solder PCB contacts installed .150 (3.81) including Quadrax. (Coax and Triax does not have contacts installed)
SX -	Front release solder PCB contacts installed .250 (6.35) including Quadrax. (Coax and Triax does not have contacts installed)
SY -	Front release solder PCB contacts installed .375 (9.53) including Quadrax. (Coax and Triax does not have contacts installed)
SX -	Front release solder PCB contacts installed .500 (12.7) including Quadrax. (Coax and Triax does not have contacts installed)

Stamped Contacts - Receptacle Side Only

STS* -	Stamped PCB contacts installed .150 (3.81) including Coax, Triax, and Quadrax. All contacts to be PCB.
STT -	Stamped PCB contacts installed .250 (6.35) including Coax, Triax, and Quadrax. All contacts to be PCB.
STU -	Stamped PCB contacts installed .375 (9.53) including Coax, Triax, and Quadrax. All contacts to be PCB.
STV* -	Stamped PCB contacts installed .500 (12.7) including Coax, Triax, and Quadrax. All contacts to be PCB.
STW* -	Stamped PCB contacts installed .150 (3.81) including Quadrax. (Coax and Triax does not have contacts installed)
STX -	Stamped PCB contacts installed .250 (6.35) including Quadrax. (Coax and Triax does not have contacts installed)
STY -	Stamped PCB contacts installed .375 (9.53) including Quadrax. (Coax and Triax does not have contacts installed)
STZ* -	Stamped PCB contacts installed .500 (12.7) including Quadrax. (Coax and Triax does not have contacts installed)

NOTE: Coaxial contacts to be ordered separately.
All Fiber Optic layouts will not have Fiber Optic contacts installed
* STE, STH, STS, STV, STW, STZ (Tooling will need to be assessed for these versions)

Fiber Optic Contact Arrangements

Introducing the New ARINC 801 Inserts for BKA (ARINC 600) Connectors

Designed for use in applications that require quick and accurate data transfer, Cannon's **ARINC 801 Fiber Optic Interconnect Solutions** are capable of operating at transmission speeds of 10 gigabits/sec (Gb/S) or more. Built for optimum performance in extreme conditions, our ARINC 801 Fiber Optic Series delivers signal, video and data when it matters most.

Several standard ARINC 600 insert arrangements are available for Cannon's Rack & Panel connector family.

BKA (ARINC 600)

Shell Cavity Identification (continued)

CONNECTOR LAYOUT DESCRIPTION Note: All layouts with "OPEN" insert cavity are not supplied with an insulator. If a blank insert is required, please consult your account representative; all standard blank inserts are plastic. Three digit number contained within the shell layout indicates total number of contacts available (including Waveguide).

ARINC 600 Connector Engaging Sequence

Mating Sequence	Flange Position With:		Flange Spacing in. (mm)
①	No Engagement		1.245 (31.62) Nom.
2	Shells Initially Engaged		1.110 (28.19) 1.073 (27.25)
3	Polarizing Pins Entering Keys		1.073 (27.25) 1.023 (25.88)
4	Contacts Entering Mating Insulator	#22	.800 (22.32) .748 (18.99)
		#20	.805 (20.44) .741 (18.82)
		#16	1.012 (25.70) .949 (24.10)
		#12	1.008 (23.60) .953 (24.20)
		Miniature Coax	Varies; See Mil-Spec. (#5 Coax)
5	Contacts Electrically Engaged	#22	.642 (16.30) .547 (13.89)
		#20	.649 (16.48) .553 (14.04)
		#16	.728 (18.49) .818 (20.77)
		#12	.772 (19.60) .692 (17.57)
		Miniature Coax	Varies; See Mil-Spec. (#5 Coax)
6	"0" Ring Engagement (BKAE Only)		.618 (15.70) .578 (14.68)
⑦	Shells Fully Mated		.522 (13.26) .488 (12.40)

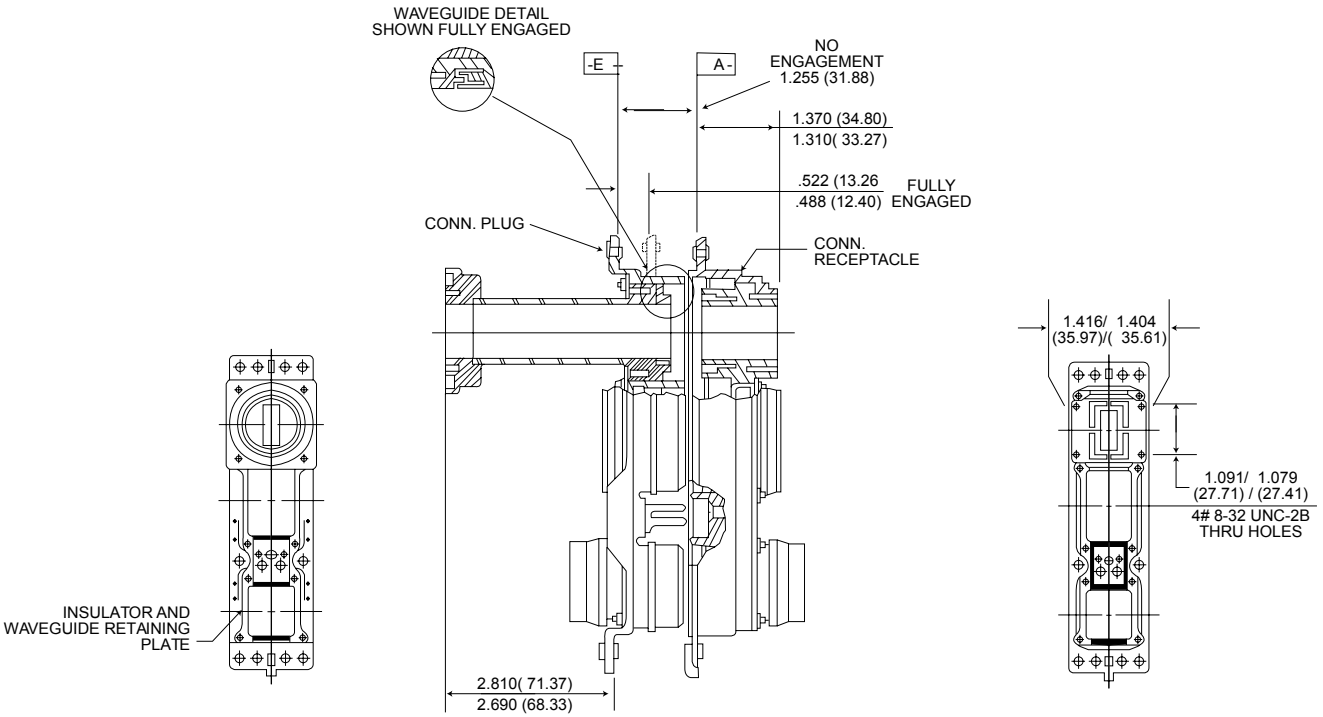

Notes:
Flush head screws are not permitted for connector mounting as they would position connector incorrectly
Dimension 7 was calculated to provide clearance for:
MCU backplate material thickness of 2.5 mm (.10 in)
Rack backplate material thickness of 2.5 mm (.10 in)
Connector mounting pan head screws, MCU 2.0 mm (.08 in)
Tolerance allowance: 3.2 mm (.13 in.) rack 2.0 mm (.08 in.)
Total: 12.2 (.50 in) (minimum)
4-40 polarizations screws maximum torque value: 5 in-lbs.
6-32 clinch nut fastening maximum terminal tightening torque: 9.6 in-lbs.

SGA (Single Gang ARINC 600)

Product Overview

- Available Rear Release/Rear Removable Front Release/ Front Removable
- Low Insertion force contacts
- Both environmental and non-environmental versions
- Polarizing post that are removable from the mating face
- Field replaceable inserts
- Up to 150 Size #22 contacts per connector
- Crimp, coax, twinax, printed circuit and wire wrapable post style contacts
- Uses standard DPX crimp, insertion/extraction tooling

SGA connectors utilize all the Signal cavity inserts and contacts from the ARINC 600 connector series. They are designed to be used where there are space constraints, in which a standard ARINC 600 connector cannot be used. ITT's SGA connector fills the need for a 150 maximum contact connector with a smaller shell design than Shell Size 2 of ARINC 600, and it has more contacts available than single gang DPX with 106 Size 22 cont acts.

Material Specifications

		SGAD	SGAE	SGAF	Specifications
Shell	Material	Aluminum alloy			QQ-A-591/A380

DPXMA/ME (ARINC 404)

Product Overview

The DPX connector comes in single, two, three and four gang versions and can accommodate up to 424 contacts. The DPX*MA connector features the LITTLE CAESAR contact assembly for rear insertion, release and extraction of crimp type contacts. DPXA shells utilize their keystone shape for polarization posts that are capable of providing up to 99 polarization positions.

DPXA-34

DPX2-34B

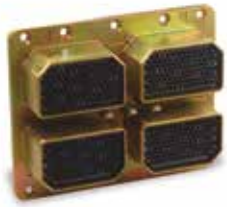

DPX3-34

DPXB-33

DPX2-33B

DPX4-33

DPXA – Single Shell DPX DPXB – Polarized ARINC Shel	DPX2 - Two Gang DPX Series DPX2A - ARINC A Shell DPX2B - ARINC B Shell	DPX3 – Three Gang DPX Series DPX4 – Four Gang DPX Series
DPXA - Single Shell DPX DPXA connectors are one-piece shell miniature rack/panel connectors. The construction offers high strength and maximum utilization of insert area for contact arrangements accommodating up to 106 contacts. Shells are keystone-shaped for polarization. Operating temperature for the DPXA is -54.2°C to +125°C (-67°F to +257°F). **DPXB - Polarized ARINC Shell** DPXB connectors are DPXA connectors with an ARINC B shelf. Additional polarization is provided by three hexagonal polarizing posts.	**DPX2 - Two Gang DPX Series** DPX2 connectors are the original two-gang versions of the DPX, and are made of the same materials and accommodate the same contact arrangements. Keystone shaped shells accommodate two DPX inserts with up to 212 contacts. The DPX2 has three polarizing posts with 99 polarizing positions. **DPX2A - ARINC A Shell** DPX2A connectors are DPX2 connectors with an ARINC A shell. This shell type has the receptacle flange placed .344 (8.74) from the front of the engaging portion of the shell, and short aluminum alloy polarizing posts permit polarization before contacts engage. **DPX2B - ARINC B Shell** DPX2B connectors supersede the DPX2A and have an ARINC B Shell. This Shell type has the receptacle flange placed .060 (1.52) from the front of the engaging portion of the shell, and polarizing posts permit polarization before the shells engage.	**DPX3 - Three Gang DPX Series** DPX3 connectors are three-gang versions of the DPX, made of the same materials, and accommodate the same contact arrangements. The three-gang version can therefore accommodate up to a total of 318 in the keystone shaped shells, with three polarizing posts that are capable of providing up to 99 polarizing positions. **DPX4 - Four Gang DPX Series** DPX4 connectors are four gang versions of the DPX, made of the same materials, and can accommodate four separate arrangements that can total up to 424 contacts. The DPX4 has three polarizing posts with 99 polarizing positions.

DPXMA/ME (ARINC 404)

Product Overview (continued)

Product Overview

DPXBMA-33

DPX2BME-33

DPX*MA - LITTLE CAESAR Contact Assembly	DPX*ME - Environmental with LITTLE CAESAR Contact Assembly
DPX*MA connectors are DPX connectors with the LITTLE CAESAR contact assembly for rear insertion, release, and extraction of crimp type contacts. Insertion requires no tool; extraction requires an expendable plastic tool. A hard dielectric, closed-entry socket insert has lead-in chamfers for positive mating of contacts. Contacts are crimpable with the M22501 tool.	DPX*ME connectors are DPXMA connectors with environmental interfacial and grommet seals, and olive drab shell finish.

How to Order (continued)

Description of Modification Codes for Special Connector Insert Assemblies

Class	DPX Insert Type
None	SERIES: DPXA, DPXB Two (2) pieces, solder pot.
MA	SERIES: DPXAMA, DPXBMA LITTLE CAESAR rear release contact retention assembly, crimp pot.
MAS	LITTLE CAESAR assembly, solder pot.
MB	LITTLE CAESAR rear release contact retention assembly, crimp pot, with separator.
MS	Ring-Loc, solder pot.
ME	Environmental, connector.
A *	Two (2) pieces, solder pot (Standard 2 pieces insert).
B *	Ring-Loc, solder pot. (See MS)
C *	(MAS) LITTLE CAESAR assembly, Solder pot.
D *	(MA) LITTLE CAESAR assembly, crimp pot, (Cat. A)
E *	Metal plates.

*NOTE: When any two of these letters are used in combination, the inserts ("A" and "B") side have the style contacts indicated.

Class	DPX Insert Type
F *	Rear release, crimp (MB type only).
DPX2	Standard 2 pieces, solder pot, both sides. Ex: DPX2-57S57S-33-0001
DPX2MA	Standard LITTLE CAESAR assembly, crimp pot both sides Ring-loc coax. EX:DPX2MA-57S57S-33-0001
DPX2MAS	LITTLE CAESAR assembly, solder pot, both sides Ring-Loc coax. EX: DPX2MAS-57S57S-33-001
DPX2MS	Ring-Loc, solder pot. Layout 25C3 pin only and 40C1 Pin and socket. EX: DPX2MS-40W1S40W1S-33-0001
DPX2CA DPX2AC (Reverse CA)	A side: (MAS) LITTLE CAESAR assembly, solder pot (32W2S) B side; Standard 2 Piece, solder pot. (57S) Ex: DPX2CA-32W2S57S-33-0001
DPX2AF	A side: Standard solder pot. B side: Rear release crimp with separator. Ex: DPX2AF-13S26S-33B-0001
DPX2BA	A side: Ring-Loc solder pot. (40W1S) B Side: 2 Piece, Solder Pot. (57S) Ex: DPX2BA-40W1S57S-33-0001
DPX2DA	A side: (MA) LITTLE CAESAR assembly, Crimp. (67S) B Side: 2 Piece, solder pot. (57S) Ex: DPX3DA-67S57S-33-0001
DPX2EB	A side: Metal plates for grounding (Coaxes). B side: Ring-Loc, solder pot. Ex: DPX2EB-C1P40W1P-34B-0001

DPXA Modification Codes

4 -	Mounting holes .120 (3.05) dia. c'sink 100° to .225 (5.72) dia.
5 -	4-40 clinch nuts.
6 -	Removable insert retainer plate.
7 -	Mounting holes .120 (3.05) dia. c'sink 82° to .230 (5.84) dia.
12 -	Mounting holes .132 (3.35)/.125 (3.18).
16 -	A106 insert with separator.
17 -	With grommet and mounting holes .120 (3.05) dia. countersunk 100° to .225 (5.72) dia.
70 -	Standard mounting with (LIF) contacts.
77 -	Same as -7 except with low insertion force (LIF) contacts (for LIF contact data).
78 -	EMI/Environmental Panel sealed version

Modification 12

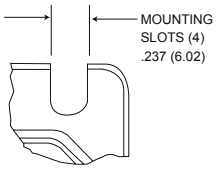

Modification	Applicable Series	Definition	Notes
00**	DPX2-33 & 34, DPX2-33A, DPX2-33F & 34F, DPX2-33M & 34M	Standard construction, mounting holes .120 (3.05) dia. and with tabs for junction shells.	Applicable for all MA, ME, NA & NE Series Connectors. **Indicates polarizing position (See Page 60)
00	DPX2-34A	Standard construction - six floating eyelets and tabs for junction shells.	
	DPXB-33, DPX2-33B, DPX3-33, DPX4-33	Standard construction, mounting holes .120 (3.05) dia. countersunk 82° to .230 (5.84) dia. - no tabs.	Applicable for all MA, ME, NA & NE Series Connectors.
	DPXB-34, DPX2-34B, DPX3-34, DPX4-34	Standard construction, mounting holes 120 (3.05) dia. - no tabs.	Applicable for all MA, ME, NA & NE Series Connectors.
01	DPX2-33 & 34, DPX2-33A & 34A, DPX2-33F & 34F, DPX2-33M & 34M	Standard construction and with standard junction shells.	
	DPXB-34, DPX2-33B & 34B	With four #4-40 clinch nuts in mounting holes.	
	DPX3-34	With six #4-40 clinch nuts in mounting holes.	Applicable for all MA, ME, NA & NE Series Connectors.
	DPX4-34	With ten #440 clinch nuts in mounting holes.	Applicable for all MA, ME, NA & NE Series Connectors.
02	DPX2-33 & 34, DPX2-33A, DPX2-34A, DPX2-33F & 34F, DPX2-33M & 34M	Standard construction and with 90° junction shells.	
	DPXB-33 & 34, DPX2-33B & 34B, DPX3-33 & 34, DPX4-33 & 34	Standard construction and with tabs for attaching junction shells.	Applicable for all MA, ME, NA & NE Series Connectors.
	DPXBME-33 & 34, DPX2ME-33 & 34, DPX3ME-33 & 34, DPX4ME-33 & 34	Standard construction and with tabs for attaching junction shells.	Applicable for NE Series.
03	DPXB-33 & 34, DPX2-33 & 34, DPX2-33A, DPX2-33F & 34F, DPX2-33M & 34M, DPX3-33 & 34, DPX4-33 & 34	Mounting holes .120 (3.05) dia. countersunk 100° to .230(5.84) dia.	Applicable for all MA, ME, NA & NE Series Connectors.
04**	DPXB-33, DPX2-33B, DPX3-33, DPX4-33	.120 (3.05) dia. mounting notes countersunk 100° to .230 (5.84) dia. and tabs for attaching junction shells.	Applicable for all MA, ME, NA & NE Series Connectors. **Indicates polarizing position (See Page 60)
08	DPX2-33 & 34, DPX2-33F & 34F	Mounting holes .137 (3.48) dia. countersunk 82° to .230 (5.84) dia.	
12	DPXB-34, DPX2-34B	With mounting slots .208 (5.28) wide.	

Dimensions shown in inches (mm)
Specifications and dimensions subject to change. Product images are reference only.

Contact Arrangements (continued)

Positive Contact Alignment Design

Rear insertion, release and extraction of crimp snap-in contacts

In the POS-ALIGN connector construction, the entire pin contact is recessed in an individual cavity in the plug insulator while the sturdy socket members are exposed and extend from the connector receptacle face.

There is a lead-in chamfer that guides the socket contact into the pin cavity assuring proper contact alignment during mating and protecting the pin contact from damage and wear.

The ITT Cannon LITTLE CAESAR contact assembly permits contacts to be inserted, released, and extracted from the rear of the connector with a simply, expendable plastic tool.

The contact is inserted from the rear of the connector through a cylindrical clip in the insulator until indented tines of the clip snap securely behind the contact shoulder. The contact is released as the plastic tool is inserted into the rear of the connector, expanding the tines beyond the contact shoulder, permitting contact extraction. The simplified contact design has a single holding shoulder and no undercuts for improved bend resistance.

Other features of the LITTLE CAESAR contact assembly include: hard dielectric socket face with lead-in chamfers for positive mating of contacts; good contact stability with minimum clearance between the contact and the insulator cavity wall; plus a “closed-down” design of the insulator’s hard dielectric around each pin contact.

This LITTLE CAESAR contact assembly was selected by the National Aerospace Standards Committee as the system to be used in a major industry connector specification for vital programs demanding great operational reliability.

The LITTLE CAESAR contact assembly is currently available in the BKA, DPX*MA, DPK, DPDMA, and DPAMA Series.

ITT

DPXNA/DPXNE

Product Overview

DPXNA/DPXNE (AS81659) (non-environmental, Type IV) and DPXNE (environmental, Types II and III) rack and panel connectors are designed to meet or exceed the requirements of SAE-AS81659, Revision B. They are used in military and aerospace applications and computer periphery equipment requirements, and are designed to operate in temperatures ranging from -65˚C to +125 ˚C. DPXNA/NE connectors are available in single, 2, 3 and 4 gang configurations with a total of 12 contact arrangements that accommodate contact sizes 12, 16, 20, as well as 22, and combination standard and coaxial contacts. Contact retention of these crimp snap-in contacts is provided by the LITTLE CAESAR rear release contact retention assembly. Environmental sealing is accomplished by wire sealing grommets and interfacial seals.

Material Specifications

Description	Material	Finish
Shell	Aluminum alloy	Cadmium plating, Type II, Class 3/QQ-P-416 with yellow chromate finish (underplating may be used)
Insulator	Thermoplastic or Thermosetting Plastic	N/A
Elastomers	Silicone Rubber	
Contacts	Copper alloy	Gold plate per MIL-G-45204, Type 1, Grade C, Class 1 with suitable underplating (silver not used)
Insulator Retaining Plate	Aluminum alloy	Anodize, blue color
Junction Shells (Not available for four gang)		Same as shell
Float Mounts	Stainless steel	N/A
Clinch Nuts		Cadmium Plating
Polarizing Posts	Zinc (die cast)	
Polarizing Keys & Retaining Plate	Nickel Silver	N/A
Screws	Brass	Cadmium Plating
Lockwashers	Phosphor Bronze	

Dimensions shown in inches (mm)

How to Order (continued)

DPX3 Three Gang

Product	**DPXNA/NE (AS81659)**	DPX 3 R NE - 240M - 33 PS - 00 01 - F0
Shell:	3 -	Three Gang Shell
RoHS Version: (Optional)	R -	RoHS Compliant Finish: Electroless Nickel
Class:	NA -	Non-Environmental (SAE-AS81659B, Type IV)
	NE -	Environmental (SAE-AS81659B, Types II and III)
Insert Designator:		See Page 49 for insert designator numbers
Shell Type:	33 -	Plug
	34 -	Receptacle
Contact Type:	P -	Pin *
	S -	Socket **
Connector Modification Code:		See Page 47 for Connector Modification Code
Polarization Position:		See Polarization Position Chart on Page 60
Contact Modification Code:		F0 - Contacts not supplied with connector (F0 not stamped on connector)

DPX4 Four Gang

Product	**DPXNA/NE (AS81659)**	DPX 4 R NE - 104M - 34 P - 00 01 - F0
Shell:	4 -	Four Gang Shell
RoHS Version: (Optional)	R -	RoHS Compliant Finish: Electroless Nickel
Class:	NA -	Non-Environmental (SAE-AS81659B, Type IV)
	NE -	Environmental (SAE-AS81659B, Types II and III)
Insert Designator:		See Page 49 for insert designator numbers
Shell Type:	33 -	Plug
	34 -	Receptacle
Contact Type:	P -	Pin *
	S -	Socket **
Connector Modification Code:		See Page 47 for Connector Modification Code
Polarization Position:		See Polarization Position Chart on Page 60
Contact Modification Code:		F0 - Contacts not supplied with connector (F0 not stamped on connector)

NOTE: On 3 & 4 gang assemblies, combination layouts, the contact type designator of the A106 layout. If applicable, precedes the 67 MS designator for standard contact sex layouts. See three (3) gang nomenclature breakdown above for 240M example (67MS ROHS Finish Zinc Plate per ASTM-B-C33 with Trivalent Chromate A106P)

* Pin is standard on '34' receptacle except A106 layout which has reversed contact sex
** Socket is standard on '33' plug except A106 layout which has reversed contact sex

How to Order (continued)

Connector Modification Code

00 -	Standard
01 -	Standard with clinch nuts in the mounting holes.
02 -	Standard with tabs for attaching junction shells.
03 -	Standard with mounting holes .120 dia. countersunk 100° to . 230 dia.
17 -	Combination of 01** and 02** (clinch nuts in mounting holes - 34 only and tabs for attaching junction shells).
22 -	Standard with clinch nuts (.33 only).
23 -	Standard with standard floating eyelets.
29 -	Standard except less grommet (NE, pin only).
30 -	Same as - 29** except with tabs for attaching junction shells.
33 -	Same as - 29** except with clinch nuts.
37 -	Same as - 29** except with clinch nuts and tabs for attaching junction shells.
39 -	Standard with standard floating eyelets and tabs for attaching junction shells.

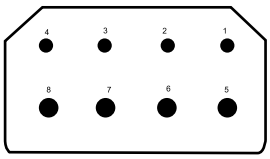

NOTE: For additional modification codes please consult Customer Service.

12	3	2	12	3	2
13	2	1	13	4	3
14	3	1	14	4	2
15	2	6	15	5	3

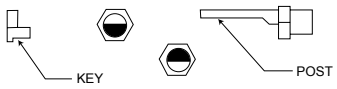

The last two digits in the DPX nomenclature (ex: DPXB-8-33B-0014) refer to the polarizing post position. When the last two digits are omitted it means the polarizing posts will not be assembled and position number is not stamped on the connector. This allows the customer to position the posts themselves and then stamp the appropriate number on the shell. If the last two digits are made 00 it means the polarizing posts are deleted.

DPXNA/NE Polarization

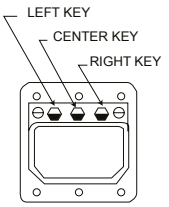

SAE-AS81659 requires that polarizing post be shipped unassembled with the connector. The user then assembles the post in the preferred position and marks the position number on the connector. All DPXNA and DPXNE connectors shall be sold this way. The position number will not be marked.

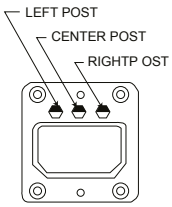

Dark area represents post on a plug, light area represents key opening on a receptacle

BKA and DPX Contacts

Termination Tooling Data (continued)

Printed Circuit Contacts

BKAF and DPX Printed Circuit Solder Post Socket Contacts Size 22 with .025(6.35) Dia. Printed Circuit Tails-Receptacle Only

The new low insertion force, front-insertable, front-removable #22 socket contacts with .025(6.35) dia., PC tails are now available for use in the BKAF non-environmental receptacle version only. These contacts can be sold separately or they can be supplied with a connector (see How to Order). Use part numbers shown in the table on the right when ordering separately. Also Applies to DPX F106 layout

Contact Supplied Installed Mod.	Part Number	Min. Post Extension	Extraction Tool
SE	031-1352-000	.150 (3.81)	CET-BKAF 22S 070343-0000

DPX 404 Coaxial Cable Assembly

ITT Cannon recommends resistance soldering for all solder contacts, particularly for RF cable where excessive heat will damage the dielectric. Wires should be pre-tinned. Bushing, endbells, and junction shells (where applicable) must be slipped over wire bundles before soldering is started. Consult factory for types not shown. The mechanical steps in wiring coaxials described below.

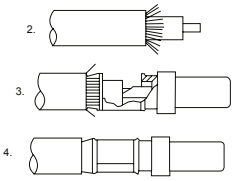

For Codes A, B, C, D, and E

Step 1 - Cut cable evenly. Trim to dimensions as shown in the table above. Care should be taken not to injure the conductor or dielectric.
Step 2 - Remove inner contact from coaxial assembly and solder it to inner conductor of cable.
Step 3 - Push inner contact back into coaxial assembly.
Step 4 - Pull outer conductor over coaxial shell, and solder.
Step 5 - Apply shrink sleeving after assembly.

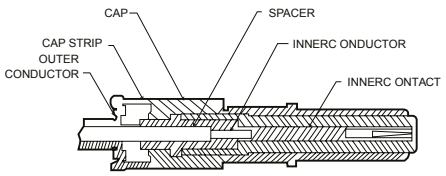

For Codes I and J

Step 1 - Cut cable evenly. Trim to dimensions as shown in the table above.. Care should be taken not to injure the conductor or dielectric.
Step 2 - Comb braid, tin conductor and remove flux.
Step 3 - Remove solder pot cover. Insert cable and solder conductor to contact.
The dielectric should butt against contact solder pot.
Step 4 - Replace solder pot cover and solder braid to ferrule.
Step 5 - Apply shrink sleeving after assembly.

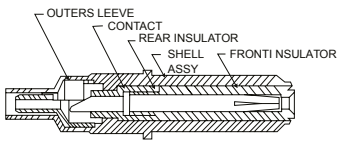

For Codes K

Step 1 - Cut cable evenly. Trim to dimensions as shown in the table above. Care should be taken not to injure the conductor or dielectric.
Step 2 - Unscrew cap and remove spacer and inner contact from coaxial assembly.
Step 3 - Push cable through center of cap and spacer.
Step 4 - Solder inner. contact to inner conductor of cable.
Step 5 - Push inner contact back into coaxial shell assembly and attach cap.
Step 6 - Separate outer conductor of cables into two pigtails 180˚ apart.
Step 7 - Attach on pigtail to each end of cap strip and solder.
Step 8 - Apply shrink sleeving after assembly.

For Codes Z and AA

Step 1 - Cut cable evenly. Trim to dimensions as shown in the table above. Care should be taken not to injure the conductor or dielectric.
Step 2 - Solder inner conductor to coaxial contact through side slot in coaxial with outer sleeve pushed back on cable.
Step 3 - Pull sleeve forward over braid and solder through holes in sleeve.
Step 4 - Solder sleeve to coaxial body.

Coaxials without the seal accommodates both Seal 1 and Seal 2 cables.
Coaxials without the seal are utilized in DPXNE connectors supplied less the grommet (modification code: - 29**) and DPXNA connectors.
Standard for the DPXNE/NA series is the A152 modification code indicates .00005 (0.0010) gold plating on coaxial contacts.

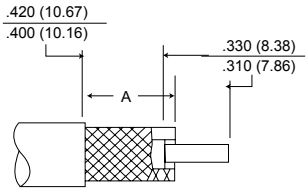

For assembly instructions, please consult the bottom of page 71 for size 5 contacts and the top of page 73 for size 9 contacts.

NOTE:
• The A32W2 & A40W1 (Ring Type Retention); AW8 & A32W4 (LITTLE CAESAR Retention) Coaxial Contact arrangements have been redesigned to provide ease of insertion/ removal of the coaxial contacts. Sealing is accomplished with the addiction of sealing sleeves provided with the coaxial contact assembly.
• The "X" dimension is taken from the rear of the shell.
• Codes G and S are inactive for new design. Use codes AD and AE.

Dimensions shown in inches (mm)
Specifications and dimensions subject to change. Product images are reference only.

BKA and DPX Contacts

Coaxial Contact Data (continued)

DPX Coaxial Contact Assembly Recommendations (For Codes B, C, D, J, K, P)

1. Center contact, rear insulator, crimp ring, support bushing and seal sleeve are packaged separately and shipped with the coaxial assembly.

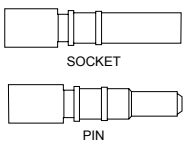

2. Use impact extraction tool no. CET-C4 (038869-0004). An insertion tool is not required. (See Item 4).

3. Cable Assembly Instructions

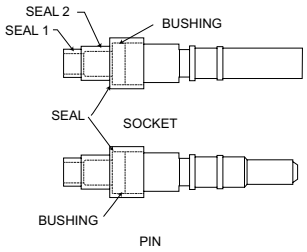

Step 1 - If applicable, determine which portion of seal sleeve should be used. If seal 2 is used, cut off seal 1 portion
Step 2 - In sequence, place seal sleeve, support bushing and crimp ring over cable jacket.
Step 3 - Trim cable per illustration.
Step 4 - Place rear insulator over dielectric.
Step 5 - Solder innerconductor to center contact.
Step 6 - Insert soldered cable firmly into coaxial with shielding over coaxial shell.
Step 7 - Pull crimp ring forward until stopped and crimped.
Step 8 - Insert coaxial assembly into connector until engaged. Push support bushing into grommet until shoulder rest on tubular extension. Then pull seal sleeve forward until it is snug against grommet.

Without Seal

(For Codes B, C, D, J, K and P)

Sealed

4. To extract coaxial, push back seal sleeve and support bushing. Then push out coaxial from engaging end with CET-C4 (038869-0004) impact tool.

5. When crimping with CA58073 crimp tool, care should be taken to avoid flaring the front end of the crimp ring. Place Crimp jaw so that the second tooth of the indentors is over the end of the crimp ring.

6. To facilitate extraction of contacts and avoid splaying the length of free cable adjacent to the rear surface of the connector should not be less than 2.000 (50.80).

DPX Coaxial Contact Assembly and Extraction Recommendations

1. Use Crimp Tool No. DIE Y211 (995-0002-249), Tool M22520 / 5-01 (995-0001-761).

2. Use extraction tool No. CET-C8. An insertion tool is not required. (See Note 5).

3. Center contact, rear insulator, crimp ring, support bushing (not applicable to RG58/RG142 coaxials), seal sleeve, front insulator, shell and ferrule are shipped unassembled in a common container.

4. Cable Assembly Instructions:

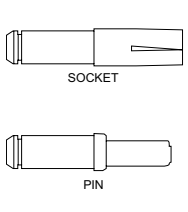

Step 1 - If applicable, determine which portion of seal sleeve should be used. If seal 2 is used, cut off seal 1 portion
Step 2 - In sequence, place seal sleeve, support bushing and crimp ring over cable jacket.
Step 3 - Trim cable per illustration on Page 68.
Step 4 - Comb out braid and flare out ends to permit entry of ferrule.
Step 5 - Complete termination per illustration.

a. Push ferrule under braid as far as it will go. Trim off braid extending beyond shoulder of ferrule, if necessary.
b. While holding ferrule in place pull crimp sleeve forward over braid until it is tight against shoulder an ferrule. Pull firmly against face of ferrule to make sure it is up tight.
c. Trim dielectric to the .035 (0.89)/.030 (0.76) dimension.
d. Carefully push inner conductor through rear insulator.
e. While holding rear insulator firmly against ferrule, trim conductor to .156 (3.96)/.146 (3.71) dimension.
f. Place contact over conductor and solder.
g. Place front insulator over contact and then push assembly into coaxial shell.
h. Place parts in jaw of crimp tool. Locate jaws at start of chamfer on crimp sleeve. Press sleeve firmly into coaxial shell and crimp.
i. After assembled coaxial is inserted into connector, push support bushing into grommet until shoulder rests on tubular extension. Then pull sealing sleeve forward until it is snug on grommet.

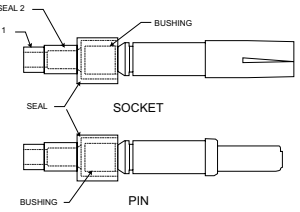

5. To extract: coaxial, push back seal sleeve and support bushing. Slip cable into extraction tool. Push tool into insert until it contacts coaxial retaining shoulder. Grip both cable and tool with one hand and pull coaxial rearward out of insert cavity.

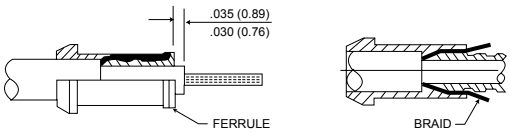

6. To facilitate extraction of contacts and avoid splaying, the length of free cable adjacent to the rear surface of the connector should not be less than 2.000 (50.80).

BKA and DPX Contacts

Coaxial Contact Data (continued)

DPX 404 Coax Contacts – DPXMA Crimp Coaxial Cable Assembly Recommendations

LITTLE CAESAR Contact Assembly Data

For Code S

Step 1 - Trim cable to dimensions shown on Page 69.

Step 2 - Complete termination per instructions as shown below.

- **a.** Solder inner conductor to coaxial contact with crimp ring over braid and rear insulator over inner conductor.
- **b.** Insert cable into coaxial with shell under braid. Crimp ring with Cannon crimp tool CA58073.

For Codes G, H

Step 1 - Trim cable to dimensions shown on Page 69.

Step 2 - Complete termination per instructions as shown below.

- **a.** Solder inner connector to coaxial contact with crimp ring pushed back on cable.
- **b.** Insert cable into coaxial and pull ring forward over braid. Crimp ring with Cannon crimp tool CA58073-0001 or CCT-408M. After crimping, crimp ring must not exceed .252 (6.40) diameter.

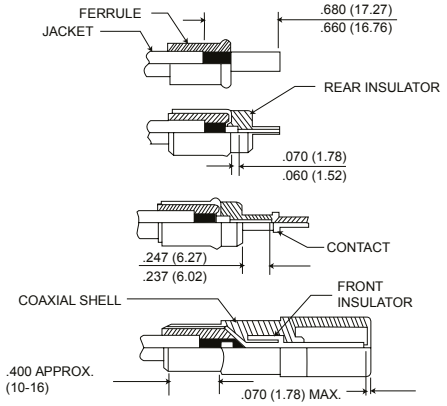

For Code AC

Step 1 - Trim cable to dimensions shown below.

- **a.** Trim jacket to .680 (17.27)/.660 (16.76) dimension. Then slide ferrule over braid until it stops against jacket, and comb out exposed portion of braid.
- **b.** Fold combed braid over ferrule as shown. Then trim dielectric to .070 (1.78)/.060 (1.52) dimension and slide rear insulator over dielectric until it presses against braid.
- **c.** Press insulator against braid and trim inner conductor to .247 (6.27)/.237 (6.02) dimension. Then place contact over conductor and crimp with MS3191-3 (do not use MS3191-1). Press parts firmly against locator during crimping operation.

Step 2 - Complete termination per instructions as shown below.

- **a.** Place front insulator over contact. Push parts into coaxial shell. While holding parts firmly against stop shoulder in coaxial shell, place jaw of crimp tool at back end of shell and crimp. Use Buchanan crimp tool #612991 (.343 [8.71) across hex].

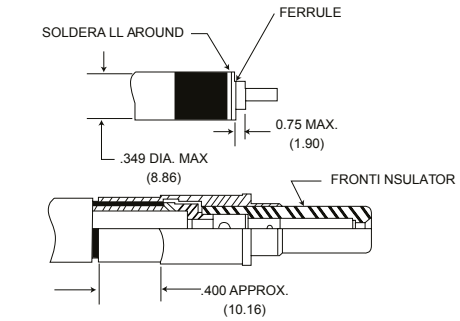

For Code V

Step 1 - Trim cable to dimensions shown below.

- **a.** Push ferrule under braid as far as it will go and press braid down tightly around ferrule.
- **b.** Solder ends of braid to ferrule by applying a small amount of solder. Avoid excess solder as it would cause braid to swell up.
- **c.** Remove any solder exceeding the .349 (8.86) max. diameter.
- **d.** Check the .075 (1.90) max. dielectric extension, retrim if necessary.

Step 2 - Complete termination per instructions as shown below.

- **a.** Place rear insulator over dielectric and conductor into contact.
- **b.** Solder contact to conductor through access hole.
- **c.** Remove excess solder from outside of contact.
- **d.** Place front insulator over contact.
- **e.** Push parts into coaxial shell.
- **f.** While holding parts firmly against stop shoulder in coaxial shell, place jaw of crimp tool at back end of shell and crimp, use Buchanan crimp tool #612991 [.343 (8.71) across hex].

BKA and DPX Contacts

Coaxial Contact Data (continued)

DPX 404 Coax Contacts – DPXMA Crimp Coaxial Cable Assembly Recommendations (continued)

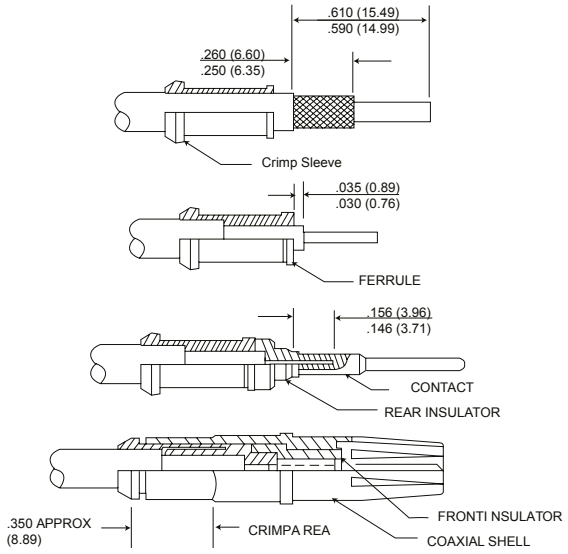

For Codes AB, AD, AE, AF and AG

Step 1 - Trim cable as shown.

Step 2 - Flare out ends of braid to permit entry of ferrule.

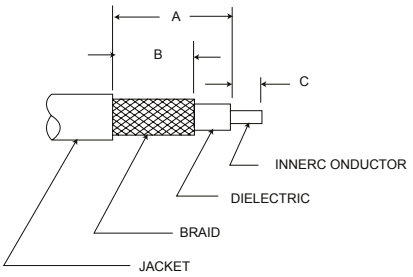

Step 3 - Complete termination per instructions as shown below.

- **a.** Push ferrule under braid as far as it will go. Trim off braid extending beyond shoulder of ferrule, if necessary.
- **b.** While holding ferrule in place pull crimp sleeve forward over braid until it is tight against shoulder on ferrule. Push firmly against face of ferrule to make sure it is up tight.
- **c.** Trim dielectric to the .035 (0.89)/ .030 (0.76) dimension.
- **d.** Carefully push inner conductor through rear insulator.
- **e.** While holding rear insulator firmly against ferrule, trim conductor to .156 (3.96)/.146 (3.71) dimension.
- **f.** Place contact over conductor and solder.
- **g.** Place front insulator over contact and then push assembly into coaxial shell.
- **h.** Place parts in jaw of crimp tool. Locate jaws at start of chamfer on crimp sleeve. Press Sleeve firmly into coaxial shell and crimp. Use Daniels crimp tool HX4-210.

BKA and DPX Contacts

Accessories (continued)

BKA Cavity Reducers

Part Number	Description
021-8756-000	Pin
021-8757-000	Socket

#5 Coax to #12 Contact

Cavity reducers are available when additional circuits are required for size 12 power contacts. These reducers, having the internal configuration of size 12 power contact, are inserted into the size 5 coaxial insulator cavity to create size 12 power contact cavity. (Non removable)

BKA Dust Caps

Part Number	Description
025-1121-001	BKAD 1-A & B-Plug
025-1122-001	BKAD 1-C-Plug
025-1123-001	BKAD 2&3-A & B-Plug
025-1124-001	BKAD 2&3-C-Plug
025-1155-001	BKAD 1-A&B-Receptacle
025-1156-001	BKAD 1-C-Receptacle
025-1157-001	BKAD 2&3-A & B-Receptacle
025-1158-001	BKAD 2&3-C-Receptacle

Conductive dust caps protect against static electricity

Note: For plug connectors with EMI grounding springs (Mod22) use the following dust cap part numbers: BKA Size 1 plug 025-1218-001, BKA Size 2 plug 025-1218-000

DPX Dust Caps

Part Number	Description
025-0767-001	DPXB-60-1 for shell size 34
025-0749-001	DPXA-59-1 for shell size 33

Conductive dust caps protect against static electricity

Polarization Kits

BKA Polarization Kits consist of: 3 Keys or Posts, 2 Screws and a Retaining Plate
DPX Polarization Kits consist of: Keys or Posts, Nuts, and Washers

DPK (83733-Style)

Product Overview

High Performance 83733-Style
Temperature Ranges of -65 °C to +200 °C
Environmental Resistant

The Cannon DPK series are high-performance environment-resistant, rectangular connectors are designed to be comparable to 83733-style interconnects. They feature crimp snap-in contacts in the dependable LITTLE CAESAR rear-release contact retention assembly. This field-proven assembly allows contacts to be inserted and extracted from the rear of the connector. Contacts are qualified to military specifications and are crimped using MIL-C-22520 crimp tools, using standard locators.

The versatile DPK Connector is suitable for many applications, particularly where environment or thermal protection is mandatory and high reliability is a requirement.

These high-performance connectors are available in two shell sizes with a variety of mounting configurations. Thirteen contact arrangements are available accommodating from 18 to 185 standard contacts. Standard contact sizes include 12, 16, 20, and 22D. Shells are made of die-cast aluminum alloy with an electroless nickel finish. Insulators are manufactured from high-grade, glass-reinforced resin conforming to MIL-M-14, and are engineered to be comparable to 83733-style components. Silicone rubber is used for wire sealing grommets, interfacial, and peripheral seals.

Performance and Material Specifications

Description	Material	Finish
Shell	Diecast aluminum alloy A-380 per QQ-A-591	Electroless nickel plate per MIL-C-26074, Class 3
Insulator	Thermoplastic or Thermosetting Plastic	N/A
Contacts	Copper alloy per QQ-C-533	Gold over suitable underplate per AS39029
Grommets and Seals	Silicone base elastomer	N/A
Mounting Hardware	Stainless steel/Alloy steel	Passivate/Cadmium plate

Mechanical Features

Description	Material
Shell Sizes	A (DPKA); B (DPKB)
Coupling	Friction, spring mount or jackscrew-coupling nut
Contact Arrangements	A-18,32,51,G131 B-48,64,78,101,59W7,71,71C15,161 G185
Contact Termination	Crimp

How to Order

DPK	R	A	-	G	131	P	*	G	-	7
DPK	R	B	-	G	185	S	*	K	-	SE

Product	**DPK (83733-Style)**	
RoHS Version:	R -	RoHS Compliant Finish: Nickel
Shell Style:	A -	Small Shell
	B -	Large Shell
Contact Modification:	G -	38999 Style contacts. Size 22D for DPKA-131 and DPKB-185 contact arrangements only
	W -	38999 Style contacts. Size 22D wrap posts for DPKA-131 and DPKB-185 layouts. .025 (0.63) square posts for .340(8.64); extension from grommet face
Contact Arrangement:	Shell Size A	18, 32, 51 and 131 (MIL-STD-1531)
	Shell Size B	8, 64, 78, 101 59W7, 71, 71C15, 161 and 185 (MIL-STD-1532)
Contact Type:	P -	Pin (Receptacle Connectors)
	S -	Socket (Plug Connectors)
Polarization (applicable to Mounting style A):	* -	Six-position shell polarization accomplished with Polarizing pins mounted on each end of shell flange. Available on mounting style A only
Connector Mounting Style Connector:	A -	Two mounting holes .197(5.00) diameter (for either nuts or jackscrews ordered separately) and two polarizing posts. (Replaces Mounting Style B)
	C -	Four MS24700-2 bushings, included for the receptacle
	F -	Four (4) clinch nuts (No. 6-32 thread)
	G -	Four .281(7.14) diameter holes (for MS24700-2 bushings or 231-0019-000 spring mounts)
	H -	Two mounting hole flange. Two (231-0019-000) spring mounts on the plug and two MS24700-2 bushing mounts on the receptacle
	K -	Four captivated, non-rotating spring mounts an the plug
	M -	Two mounting hole flange. Two mounting holes .281(7.14) diameter (for MS24700-2 bushings or 231-0019-000 spring mounts)
	X -	Two guide pins with two (231-0019-000) spring mounts on the plug and two guide sockets with two .197(5.00) diameter holes on the receptacle
	Y -	Two guide sockets with two (231-0019-000) spring mounts on the plug and two guide pins with .197(5.00) diameter holes on the receptacle
	Z -	Two staggered clinch nuts on the receptacle (No. 6-32 thread)
Connector Modification Code:	7 -	Standard product line, environment resistant
	SE -	Solder PCB contacts installed .150" min (3.81mm) (Coax, Triax, and Quadrax does not have contacts installed)
	SF -	Solder PCB contacts installed .250 min (6.35mm) (Coax, Triax, and Quadrax does not have contacts installed)
	SG -	Solder PCB contacts installed .375 min (9.53 mm) (Coax, Triax, and Quadrax does not have contacts installed)

NOTE: DPK Series connectors are only offered with contacts at this time.

DPK (83733-Style)

How to Order (continued)

Mounting Styles / Applications

DPK connectors for rectangular or staggered mounting are available in both two- and four-spring mount assemblies, or the same shelf style may be ordered to accommodate bushing assemblies. In the spring mount version, the spring-loaded mechanism will compensate for a panel space variation of up to .070(1.78) while ensuring electrical and environmental integrity.

DPK connectors are also available with polarizing posts, accommodations for jackscrews, and coupling nuts for cord-to-card and cord-to-panel applications. Another shelf style has two or four mounting holes fitted with captive clinch nuts. For mounting dimensions of the various mounting styles shown here, please refer to page 88.

Style A Mounting style A is designed for cord-to-panel and cord-to-cord applications. Connectors are supplied with two polarizing posts installed and provisions for installation of two jackscrew assemblies (P/N 305-0007-000) or two coupling nut assemblies (P/N 335-0002-000). Mounting style A replaces Mounting Style B.

Style C Mounting style C is designed for cord-to-panel or rack-to-panel applications. Connectors are supplied with four MS24700-2 self-locking bushings (P/N 012-0515-000) on the receptacle and four spring mount assemblies (P/N 231-0019-000) on the plug.

Style F Mounting Style F is designed for rack-to-panel applications. Connectors are supplied with four captive clinch nuts installed.

Style G Mounting style G is designed for rack-to-panel applications. Connectors are supplied with four .281(7.14) diameter holes which will accommodate either four MS24700-2 self-locking bushings (P/N 012-0515-000) or four spring mounts (P/N 231-0019-000).

Style H Mounting style H is designed for rack-to-panel applications. Connectors are supplied with two .281(7.14) diameter holes which are staggered. Two spring mounts (P/N 231-0019-000) are on the plug end two MS24700-2 self-locking bushings (P/N 012-0515-000) are on the receptacle.

Style K Mounting style K is designed for rack-to-panel applications. Connectors are supplied with four captivated, non-rotating spring mounts on the plug.

Style M Mounting style M is designed for rack-to-panel applications. Connectors are supplied with two .281 (7.14) diameter holes which are staggered and will accommodate two MS24700-2 self-locking bushings (P/N 012-0515-000) or two spring mounts (P/N 231-0019-000).

Style X Mounting style X is designed for rack-to-panel applications where positive alignment is required before connectors are mated. Plug has two guide pins (P/N 320-1070-000) and two spring mounts (MIL-STO-1533); receptacle has two guide sockets (P/N 320-1069-000) and two .197 (5.00) dia. holes.

Style Y Mounting style Y is identical to mounting style X, except the guide sockets (P/N 320-1069-000) are on the plug and the guide pin (P/N 320-1070-000) and springs are on the receptacle.

Style Z Mounting style Z is designed for use in rack-to-panel applications. Connectors are supplied with two captive clinch nuts which are staggered.

DPK (83733-Style)

Polarization

Polarization (Mounting Style A only)

Polarizing Post Alternate Positions

Pin inserts polarizing positions are 180 opposite socket insert polarizing positions. Shaded areas indicate extended portion of the polarizing post. Cord to panel DPK connectors are available in 35 alternate polarizing positions by changing indexing of the polarizing posts. Keystone corners and hexagonal posts provide this wide range of alternate positions.

Face view of socket insert plug connector engaging end.

DPK (83733-Style)

Assembly

Mounting Assembly – Jackscrew/Coupling Nut

Installation of jackscrew and coupling nuts in mounting style A and B.

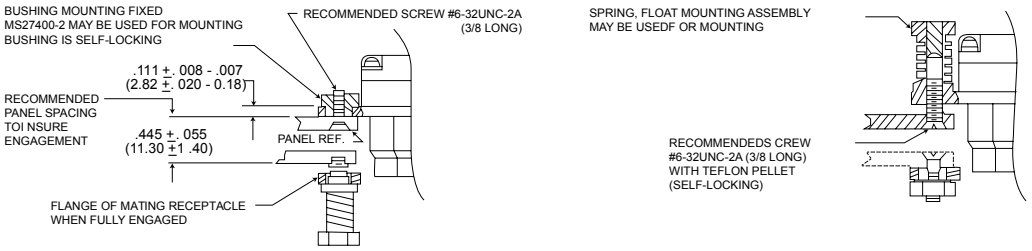

CORD-TO-CORD INSTALLATION

PANEL MOUNTING

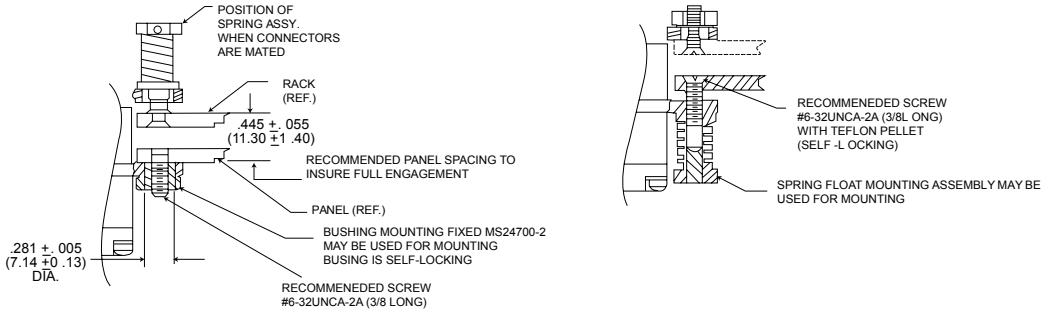

Mounting Assembly – Bushing/Spring Mount

Installation of mounting styles utilizing bushing and spring mount assemblies.

PLUG

RECEPTACLE

Mating Forces

The axial forces required to fully mate or separated the plug and receptacle shall not exceed the values listed.
Mating force at .390 (9.91) minimum spacing

Shell Size	Without mounting accessories	Spring Mounting	
		Maximum	Normal
A	70 max.	176	145
B	95 max.	176	150

For connectors using spring mounting, the mating forces become a function of the spring loading. Values listed apply to connectors mounted as specified above at minimum panel spacing.

Dust Covers

DPK (83733-Style)

Assembly (continued)

Assembly/Shielded Contacts

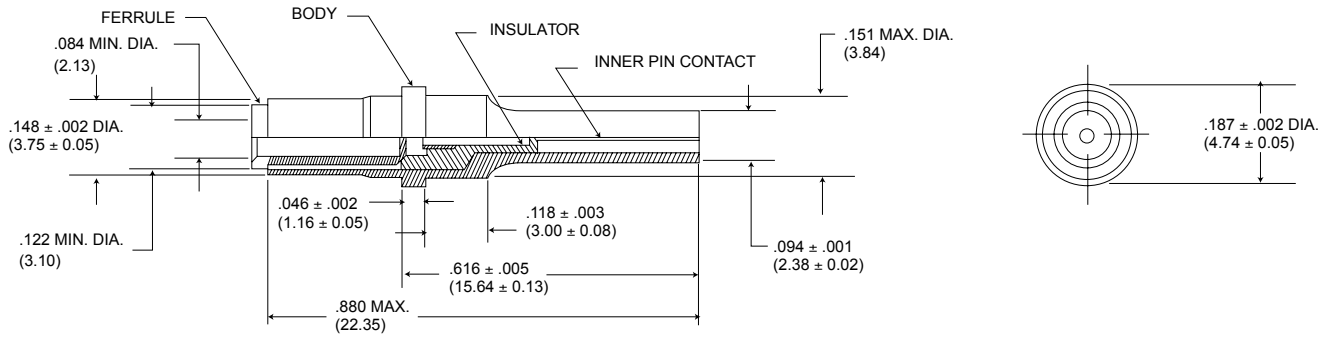

Socket

249-1826-000
Size 12/RG-179B/U Cable (used in 71C15 layout)

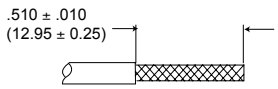

Pin

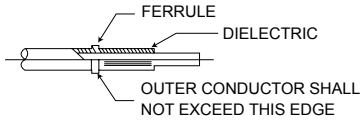

249-1825-001
Size 12/RG-179B/U Cable (used in 71C15 layout)

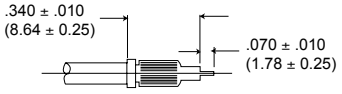

Assembly/Shielded Contacts

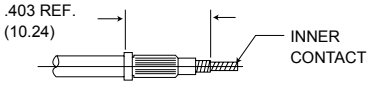

Step 1.
Strip outer jacket to dimensions shown to expose outer conductor.

Step 2.
Slip (or install) ferrule over outer conductor against cable jacket. Exposed portion of the outer conductor must be combed out then folded back over ferrule.

Step 3.
Trim cable to dimensions, as shown. (Ferrule must butt against cable jacket).

Step 4.
Install inner contact against dielectric then crimp contact and center conductor with M22520/2-01 crimp tool using a M22520/2-30 locator.

Step 5.
Insert cable,ferrule and inner contact to rear of shell and crimp into place with M22520/5-03 crimp tool.

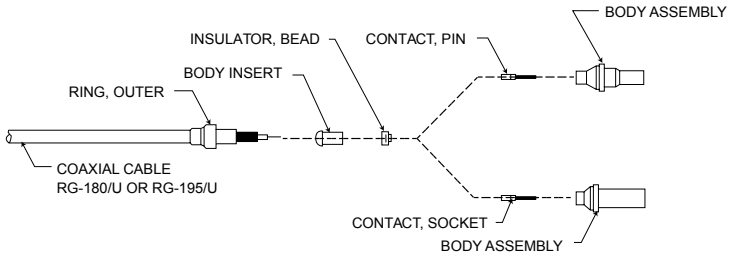

Dimensions shown in inches (mm)
Specifications and dimensions subject to change. Product images are reference only.

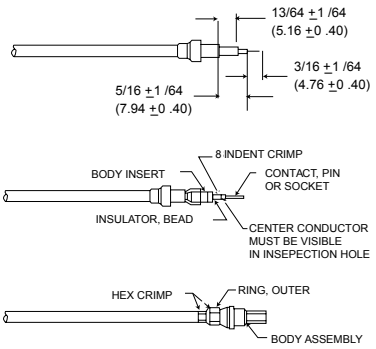

DPK (83733-Style)

Assembly (continued)

Coaxial Contact/Assembly

249-5500-010 Socket*
249-5500-011 PIN*

Step 1.
Slide outer ring over cable as shown (Figure 1).

Step 2.
Strip cable as shown (Figure 1).

Step 3.
Install body insert, insulator bead, and contact on cable as shown (Figure 2.)

*These contacts are used in the F59C7 layout.

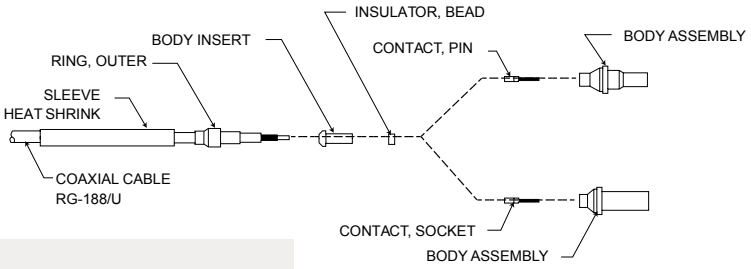

Step 4.
With body insert, insulator bead, and contact firmly in place, crimp the contact with tool M22520/2-01 (setting number 3) and locator M22520/2-30 (Figure 2). Caution: The assembled components must be tightly in place after crimping.

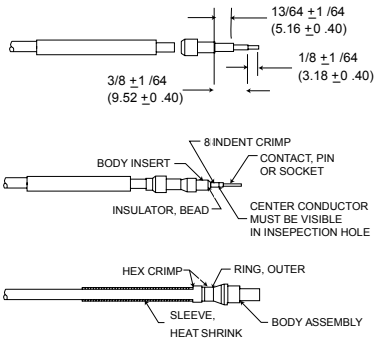

Step 5.
Slide body assembly over components and under shield until firmly bottomed in place. Locate outer ring over shield and against body as shown (Figure 3).

Step 6.
With cable and body assembly securely held together, hex crimp the outer ring with tool CCT-C9 (Figure 3). Important: For optimum hex crimp, firmly bottom the outer ring against the shoulder of the hex die before compressing the handles.

NOTES:
1. These assembly instructions apply to 249-5500-010, and 249-5500-011.
2. The following assembly tools are required: a) CCT-C9 hex crimp tool b) MS3198-Q W/L-3198-C1 contact crimp tool and locator c) 149°C(300°F) hot air gun (recommended): Regal heat Gun No. 9A) d) Blades, scissors, and picks.

249-5500-012 Socket*
249-5500-013 PIN*

Step 1.
Slide heat-shrink sleeve and outer ring over cable as shown.

Step 2.
Strip cable as shown (Figure 1). Caution: Do not nick shield wires.

Step 3.
Install body insert, insulator bead, and contact on cable as shown.

Step 4.
With body insert, insulator bead, and contact firmly in place, crimp the contact with tool M22520/2-01, using setting number 3 and locator M22520/2-30 (Figure 2). Caution: The assembled components must be tightly in place after crimping.

Step 5.
Slide body assembly over components and under shield until firmly bottomed in place. Locate outer ring over shield and against body as shown (Figure 3).

Step 6.
With cable and body assembly securely held together, hex crimp the outer ring with tool CCT-C9 (Figure 3). Important: For optimum hex crimp, firmly bottom the outer ring against the shoulder of the hex die before compressing the handles.

Step 7.
The final step is to shrink the heat sleeve in place with a hot air source of 149°C to 327°C (300°F to 621°F) (Figure 3).

NOTES:
1. These assembly instructions apply to 249-5500-010, and 249-5500-011.
2. The following assembly tools are required: a) CCT-C9 hex crimp tool b) M22520/2-01 contact crimp tool and locator c) 149 C(300 F) hot air gun (recommended): Regal heat Gun No. 9A) d) Blades, scissors, and picks

*These contacts are used in the G59C7 layout.

DPK (83733-Style)

Additional Product Overview

DPK Test Data

The following presents the certified capabilities of Cannon's high-performance rectangular DPK Racka nd Panel series connectors in relation to the critical performance and design requirements of 83733-style connectors. The data provided is a summary of qualification test results, extracted from the original reports on file at the ITT Cannon Test Laboratory.

The successful completion of these tests clearly demonstrates that the DPK series connectors and contacts meet or exceed the performance requirements of 83733-style connectors.

The DPK connectors listed below represent the description and identification of the test specimens used in the qualification sequence.

DPKA-G-131PC-7 (Receptacle)
DPKA-G131SK-7 (Plug)
DPKB-G185PC-7 (Receptacle)
DPKA-G185SK-7 (Plug)

Table I below lists the conducted tests performed in accordance with the applicable test procedures. Table II provides the corresponding test levels, parameter limits, and measured values.

Table I (Test Performed)

Test Description	Test Description	Test Description	Test Description
Examination Of Product	Contact Separating Forces	Low Level Contact Resistance	Moisture Resistance
visual Examination	Connector Mating and Unmating Forces	Thermal Shock	Altitude Immersion
Sample Preparation	Contact Retention	Crimp Potential Drop	Insert Retention
Insulation Resistance - 25°C	Endurance	Vibration (Random)	Corrosion
Withstanding Voltage - Sea Level	Gold Plating Porosity	Physical Shock	Analyses
Withstanding Voltage - Altitude	Temperature Life	Ozone Exposure	Service and Storage Life
Contact Resistance	Insulation Resistance - 200°C	Fluid Immersion	Gases and Toxic or Corrosive Fumes

Table II

Test or Environment	Test Level or Special Requirements	Parameters Limits	Measured Values or Comments
EXAMINATION OF PRODUCT	Assure compliance with: a) Applicable detail specifications and control drawings b) Materials c) Design and construction d) Dimensional e) Finish f) Product identification g) Workmanship	Compliance to applicable detail specification and control drawings.	Product submitted accompanied by Q.A.certificates of compliance. Complied with the applicable acceptance requirements for qualification testing.
VISUAL EXAMINATION	Visual examination of qualification test specimens for completeness, workmanship, identification and /or other detrimental conditions.	Visual examination acceptance.	No visible detection of any condition detrimental to normal function.
SAMPLE PREPARATION	MIL-W-16878/4A, 28 AWG (min. dia.) and 22 AWG (max. dia.) wire.Daniels WA22A crimping tool. M22520/2-06 and M22520/2-09 contact positioner for resp.22D size socket and pin. MS7495A22M insertion and MS27495R22M removal tool.	Assemblies to conform with specified wiring and termination requirements.	Qualification test specimens prepared and terminated in accordance with specified wiring requirements. No difficulties encountered during wiring operation.
INSULATION RESISTANCE [25 C (77 F)]	Unmated condition. 50% of contact complement measured. Between adjacent contact pairs and each contact and connector shell.	5.1 Gigohms minimum at 500 Vdc. Electrification Time 120 secs. maximum.	Insul. res. range (ohms) (25 C) DPKA Adj. Cont. Cont./Shell 300G-1.0T 1.1T-1.8T DPKB 400G-1.6T 1.1T-20T (Ganged parallel test circuits)
DIELECTRIC WITHSTANDING VOLTAGE (SEA LEVEL)	Mated condition. 50% of contact complement measured. Test voltage 1350 Vac/rms-60hz, applied between adjacent contact pairs and each contact and connector shell.	No electrical breakdown, flashover or excessive current leakage.Electrification time 2 secs. minimum.	No evidence of breakdown or flashover Leakage <.5mA. (Ganged Parallel test circuits)
SALT SPRAY (CORROSION)	Method 101, test condition B. (48 hours) unmated. Salt solution 5% by weight. S.G. 1.026 to 1.040 at 22.8°C-23.9°C (73°F-75°F). Solution pH6.5 to 7.2 and chamber temp 33.9°C to 36.1°C (93°F to 97°F).	Visual examination. No degradation of normal connector functions.	No detrimental corrosive attack on connector's surface finish or contacts.
CONTACT RESISTANCE [AT 25 C AND 200 C (77 F AND 392 F)]	Mated condition 20% of contact complement tested. Test circuit per Fig. 2 measured across points YY performed at 25°C and 200°C (77°F and 392°F). Contact/ Wire size Test Current Adc 22D/28 1.5 22D/22 5.0	Max. DIELECTRIC WITHSTANDING VOLTAGE (ALTITUDE)	Mated condition. 50% of contact complement measured. Performed at simulated altitude of 70,000 ft. (33.7 mm Hg pressure) Test voltage 825 Vac/rms-60 Hz, applied between adjacent contact pairs and each contact and connector shell.	Same as at sea level conditions.	No evidence of breakdown or flashover. Leakage ≤.5mA. (Ganged Parallel test circuits)
INSULATION RESISTANCE ELEVATED TEMP.[200°C (392°F)]	Unmated condition. 50% of contact complement measured. Test points identical to those measured at 25°C (77°F). Oven ambient controlled at 200°C (392°F). Stabilization period 30 minutes minimum.	204 Megohms minimum at 500 Vdc. Electrification time 120 secs. maximum,	Insul. Res. range (ohms) [200°C (392°F)] DPKA Adj. Cont. Cont./Shell 1.4G-10G 2.4G-4.0G DPKB 0.75G-10G 2.26G-5.0G (Ganged parallel test circuits)
VIBRATION (RANDOM)	Method 214, Test condition II, Letter 'G'. Test level envelope per figure and table 214-2. Contact circuit series wired for current discontinuity monitoring. Eight hours duration in each of three mutually perpendicular axes. Connector mating depth .450 (11.43) panel spacing.	No current discontinuity ≥1.0 microsec. No cracking, breaking or loosening of connector parts.	Connectors met random vibration requirements. No electrical discontinuity detected.
PHYSICAL SHOCK	Mated condition, .450 111.43) panel spacing. Shock pulse duration 11 ± 1mS, waveshape terminal peak sawtooth, peak amplitude 20g. Contact circuit series wired for current discontinuity monitoring. One shock pulse in each of three mutually perp. axes.	No current discontinuity ≥1.0 microsec. No cracking, breaking or loosening of connector parts.	Connectors met physical shock requirements. No electrical discontinuity or damage detected.
MOISTURE RESISTANCE	Method 106, (Step 7b omitted) Mated condition. 10 days humidity and temperature cycling. At end Step 6 final cycle at 25°C (77°F) and 90-98% RH insulation resistance measured 100% between each and all other contacts and the shell in parallel circuit.	Insulation resistance at final humidity cycle 102 Megohms minimum at 50 Vdc.	Insul. Res. range (ohms) final humidity cycle. DPKA DPKB 1.66-500G 1.6-500G Avg: 224G Avg: 190G
ALTITUDE IMMERSION	Mated condition. Immersed in 5% salt solution by weight. Unsealed wire ends exposed to chamber atmosphere. Simulated test altitude 75,000 ft, (1.0 inch Hg). 30 mins. at altitude followed by 15 mins. at room ambient, Repeat for total of 3 cycles. Insul. res. and OWV measured 100% of contact complement at room ambient and submerged.	Insulation resistance 1.2 Gigohm minimum at 5 Vdc. DWV 1350 Vac/rms - 60 Hz, electrification time 60 secs. minimum. No breakdown, flashover or leakage ≤2 mA,	Final insul. Res ranges (ohms). DPKA DPKB 1.5T-4.5T 0.7-3.5T Avg. 1.9T Avg: 1.3T DWV - No evidence of breakdown or flashover Leakage ≤2 mA.
INSERT RETENTION	Unmated. 46 1bf/in². pressure lead applied to each inert face at 5 46 1bf/in². maintained for 5 secs. min. at specified load.	No insert dislocation from normal position in the connector shell.	No evidence of insert movement and/or dislocation from normal position.
OZONE EXPOSURE	Unmated. Ozone concentration 0.010 to 0.015 percent by volume. Exposure period 2 hours minimum at room temperature.	No deterioration.	No evidence of ozone effects.
FLUID IMMERSION	Fluid immersion rest fluids and procedures per Table 4: Sample No. Test Fluid 4-1P/R MIL-L-7808 4-2P/R MIL-L-23699 4-3P/R M2-V CHEVRON 4-4P/R MIL-H-5606 4-5P/R MIL-A-8243 4-6P/R MIL-C-25769 4-7P/R MIL-T-5624 (JP-5) 4-8P/R Coolanol-25 4-9P/R Regular (Leaded commercial auto-gasoline 4-10P/R Solvent (a) MIL-STD-202) 4-11P/R Solvent (b) MIL-STD-202) 4-12P/R Solvent (c) MIL-STD-202)	No detrimental damage of effects to connector performance. Axial Mate and unmate forces after fluid immersion 175 1bf max.	Other than evidence of normal light swelling of the connector resillent seals, the samples did not exhibit any detrimental affects. Mateability was not impaired. After Fluid Immersion Mating/Unmating forces (Pound-Force) DPKA Mate Unmated DPKB Mate Unmated 4-1P/R 125 27 4-7P/R 138 71 4-2P/R 125 31 4-8P/R 141 57 4-3P/R 127 35 4-9P/R 137 63.5 4-4P/R 132 35 4-10P/R 145 76 4-5P/R 132 63 4-11P/R 150 81 4-6P/R 123 55 4-12P/R 148 86
GOLD PLATING POROSITY	Unwired, unassembled contact bodies. One part (by volume) concentrated Nitric Acid (S.G.-l.42) to one part distilled water. 30 secs. minimum immersion period.	No visible reaction (bubbles forming) to reagent.	No evidence of reaction to reagent.
TEMPERATURE LIFE W/ CONTACT LOADING	Wired mated condition, with contacts under specific load: #22D (5 lbs.); #20 (7.5 lbs.);16 (12.5 lbs.). A current of 100 MA was applied during life of test. Test duration, 1000 hours at temperature of + 200°C (392°F).	Withstand temp life. No damage. No discontinuity higher than 1.0 microsecond. No contact dislodging under load.	No evidence of contact dislodging and/or electrical discontinuity of 1.0 microsecond or greater during the specified temperature life exposure under contact loading conditions. All post test requirements were met.

Conclusion

All subject test specimens, connector components, materials, accessories and contacts covered by this report satisfied and/or exceeded the specified requirement.

DPK (83733-Style)

Additional Product Overview

Weights

The following table provides the weights of DPK connector assemblies, mounting hardware, contacts, and sealing plugs. All connector assembly weights are listed without contacts (FO) and mounting hardware. To determine the total connector weight, add the weights of the mounting hardware, contacts, and sealing plugs to the connector assembly weight.

Example:
DPKB-101SK-7 (with 90 contacts and 11 sealing plugs)

	Weight Pounds	Weight Grams
DPKB-101SG-7-FO	.2332	105.78
Type K Spring Mount	.0825	37.42
90 Number 20 Socket Contacts	.0639	28.98
11 Number 20 Sealing Plugs	.0020	0.88
Maximum Connector Weight	.3816	173.06

Part Number (Description)	Lbs.	Grams
DPKA-18PG-7-F0	.1474	66.86

DPA

Product Overview

DPA – Miniature Rack/Panel Connectors
DPA plugs are rugged, miniature rack/panel plugs that maximize insert space within a one-piece shell. Polarization is achieved via a keystone-cornered shell, and the coupling mechanism is based on friction. The operating temperature range is –55 °C to +125 °C (–67 °F to +257 °F).

DPAF – Float Mount Shells
DPAF plugs are DPA plugs equipped with four rivets and washers on the contact termination side. The floating rivets have a 0.093 in (2.36 mm) inner diameter and provide a minimum float of 0.032 in (0.81 mm).

DPAL - Large Flange Shells
DPAL plugs are DPA plugs with a large flange.

DPAMA – LITTLE CAESAR® Contact Assembly
DPAMA plugs incorporate the proven LITTLE CAESAR® contact assembly, enabling rear insertion, release, and extraction of crimp-type contacts. Insertion requires no tool; extraction uses a disposable plastic tool. The hard dielectric, closed-entry socket insert includes lead-in chamfers to ensure proper mating of pin contacts. The contact design is simplified and robust, providing greater resistance to bending or damage. Contacts are crimped using the M22520/1-01 tool.

Material Specifications

		DPA/DPAF/DPAL	DPAMA
Shell	Material	Aluminum alloy	
	Finish	Cadmium plate with yellow chromate

Modifier (Contact):		Add F0 to order connector less contacts. Consult your account representative for other modifications.

Note: Arrangements with coax contacts, such as 24C2, may be ordered without coax contacts by substituting a "W" for the "C" e.g., DPA-24C2-34P with two coax contacts becomes DPA-24W2-34P with two cavities. The customer can then order separately any snap in coax contact shown on page 98. The customer is thus able to "create" arrangements with infinite combinations of coax contacts.

DPGM/DPJM/DPJMB

Product Overview

Cannon's DPGM, DPJM, and DPJMB connectors are engineered for applications where space and weight are critical considerations. Their rectangular shape maximizes space utilization and facilitates easy removal of equipment for inspection or repair. The DPGM and DPJM connectors feature crimp, snap-in contacts with ring-type retention. The DPJMB connectors, on the other hand, incorporate the proven LITTLE CAESAR® rear-release contact retention assembly, enabling rear insertion, release, and extraction of crimp, snap-in contacts. They both have one piece diallyl phthalate insulators with polychloroprene wire-sealing grommets. A peripheral seal design accommodates axial tolerances of up to 0.125 in (3.175 mm) while maintaining effective environmental sealing. The size 34 shell includes a rubber seal encased to allow the step-down design of the mating size 33 shell to seat securely into and against it.

These connectors also feature keystone corners for polarization and use friction coupling. Two shell styles with different mounting provisions are available.

For all new applications, these connectors are supplied only with insulators in the standard configuration–pin insulators in the size 34 (receptacle) shell and socket insulators in the size 33 (plug) shell.

For replacement purposes, it is recommended that customers convert to the standard insulator configuration where feasible. However, for cases where conversion is not possible, Cannon will continue to supply connectors with reversed insulators to support existing equipment.

Material Specifications

		DPGM/DPJM/DPJMB
Shell	Material	Aluminum alloy
	Finish	Cadmium plate with olive drab irridite
Insulator	Material	Diallyl phthalate
Contacts	Material	Copper alloy
	Finish	Gold plate
	Termination	Crimp

DPGM/DPJM/DPJMB

How to Order

Product	**DPG/DPJ**	
Class:	M -	One piece insulator ring - type retention
	MB -	LITTLE CAESAR contact retention assembly
Contact Arrangement:		See Page 103 for Contact Arrangements
Shell Style:	33 -	Plug
	34 -	Receptacle
Contact Type:	P -	Pin
	S -	Socket
	K -	33-K-With 6-32 clinch nuts 34-K-Floating eyelet with 6-32 tapped I.D.
	B -	33-B-Clearance holes for 6-32 screw 34-B-Floating eyelet with .140 I.D.
Modification:	2 -	.125 (3.18) removed from front lip of -33 shell

Contacts, Coaxials and Junction Shells must be ordered separately, except for the DPJMB where the contacts are supplied with the connector. When (ordering or reordering) please specify the 3-4-3 contact part number as shown. We have cross-referenced these new part numbers with the previous part numbers (which have been obsoleted) for your convenience.

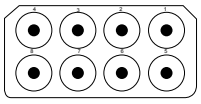

Example:
031-0900-001 new "3-4-3" part number
(038819-001) previous part number

DPGM/DPJM/DPJMB

Assembly

Wiring and Crimping Contacts

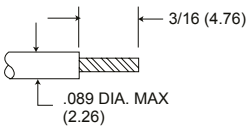

Step 1 - Drop contact into crimp tool, it will locate on the contact shoulder.

Step 2 - Take wire stripped to dimensions above, and push into the contact crimp pot until it is completely home. Where outside diameter of wire in the #12 or COAXIAL contact is less than .096 (2.44), a rubber bushing most be slipped over the wire before crimping (see page 108).

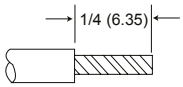

Step 3 - Squeeze the crimp tool to secure the wire into the contact. It is not possible to remove the contact from the crimp tool until crimp is completed.

Step 4 - Remove wired contact from tool.

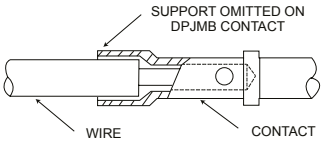

Step 5 - Inspect - If wires are stripped and crimped correctly, the wire will be visible through the small inspection hole in the contact.

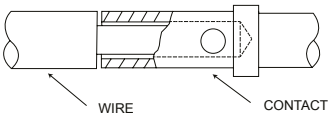

#20 Contact

#20-18, #16 & #12 Contact

Contact Insertion

After the contacts have been crimped, they should be threaded through the junction shell and inserted with the tools shown in the table. It is recommended that the contacts be inserted in the center horizontal row first, then work to the top and bottom horizontal rows.

Contact Size	Tool Description	Assembly Number
20	CIT - 20	038894-0000
16	CIT - 16	038895-0000
12	CIT - 12	038896-0000
Coaxial 50-75,95 & 150 ohm	CIT - C2	038901-0000

Contact Extraction

If it is necessary at any time to remove contacts, this may be accomplished with an impact extraction tool. Simply place the correct tool on the engaging end of the contact and push. A reversible tip is provided for pins and sockets.

Contact Size	Tool Description	Assembly Number
20	CET - 20A	038889-0100
16	CET - 16	038888-0000
12	CET - 12	038890-0000
Coaxial 50-75,95 & 150 ohm	CET - C1	038869-0000

50 Ohm Contact (RG-196U)
(assembly steps 1, 2, 3, 4, 5 & 8)

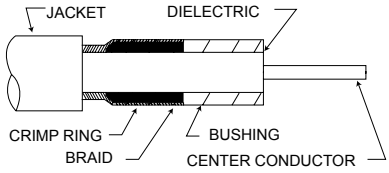

75 Ohm Contact (RG-187U)
(assembly steps 1, 2, 3, 5 & 8)

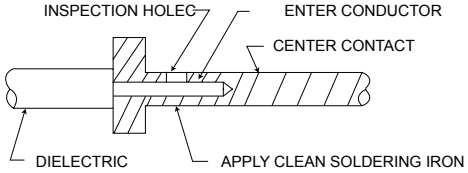

95 Ohm Contact (RG-195U)
(assembly steps 1, 3, 6, 7 & 8)

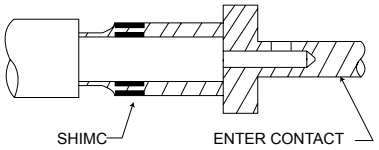

Assembly Steps

Step 2

Step 3

Step 4

Step 1 - After the coaxial cable has been stripped to the proper dimensions, tin the center conductor. If O.D. of cable is less than .096 (2.44), slip rubber bushing over wire. (50, 75 & 95 ohm)

Step 2 - Assemble crimp ring under braid and add bushing to cable. (50 & 75 ohm)

Step 3 - The center contact is supplied loose in the polyethylene bag. Insert the tinned conductor into the contact. Wire must be visible through inspection hole and dielectric pushed against contact shoulder. For 150 ohm contact shoulder must be flush against bushing. Heat contact with a clean soldering iron. Avoid solder outside contact, (50, 75, & 95 ohm)

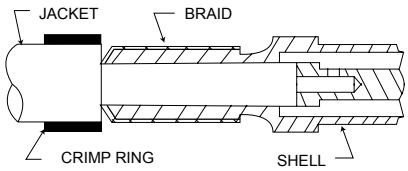

Step 4 - Wrap shim around braid. (50 ohm)

Step 5 - Feed cable and assembled parts into coaxial shell. Care is required if braid is to fit smoothly inside the shell. (50 & 75 ohm)

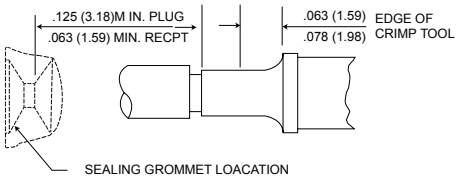

Step 6 - Thread crimp ring over cable. Feed center contact into coaxial shell with the shell between the dielectric and the braid. (95 ohm)

Step 7 - Slip crimp over the braid. (95 ohm)

Step 8 - Crimp - crimp tool must be located 1/16 (1.58) to 5 / 64 (1.98) from shoulder of coaxial. (50, 75 & 95 ohms)

Step 6

Step 8

DPD/DPDMA

Product Overview

DPGM/DPJM Coaxial Contact Assembly

Cannon's DPD Rack and Panel connectors are distinguished from other connector lines by their rectangular shape, which provides maximum space utilization an rack or chassis mounted equipment. The DPD is used in any commercial application where moisture/environmental resistance is not required, such as I/O connector or computer panels, GFE test equipment, and GSE ground support equipment. For example, one-half of a connector assembly is mounted on a radio rack, or panel, and the mating connector is attached to a cable that connects to another instrument or rack. The DPO has a temperature range of -55˚C to +125˚C (-67˚F to +257˚F). In addition to standard DPD connectors with solder contacts, the DPDMA version has rear insertion, rear release crimp, snap-in contacts that feature the LITTLE CAESAR rear release contact retention assembly used in many other ITT product lines.

DPD - Standard Rack and Panel Connector Series
DPD connectors are the original rectangular rack and panel connectors with solder-type contact termination. They support a wide range of contact arrangements and are compatible with various endbells and junction shells.

DPDMA - LITTLE CAESAR® Contact Assembly
DPDMA connectors are DPD connectors equipped with the LITTLE CAESAR® contact assembly, allowing rear insertion, release, and extraction of crimp-type contacts. Contacts are inserted by hand and extracted using a disposable plastic tool. The hard dielectric, closed-entry socket inserts feature lead-in chamfers to ensure proper mating of pin contacts. DPD and DPDMA connectors are fully intermateable.

DPD2 - Two-Gang Version of DPD
DPD2 connectors are two-gang versions of the DPD solder-type connectors, designed to accommodate twice the circuitry for instrument panel disconnect applications. The DPD2 shares the same shell style and materials as the DPD but includes a center coupling screw for secure engagement. Various coupling devices are illustrated on pages 116–117. DPD2 connectors can also be ordered without the engaging device by omitting the letter code "M" in the ordering nomenclature. Two optional polarizing posts allow for up to six alternate insert positions (see page 119).

DPD2MA - LITTLE CAESAR® Contact Assembly
DPD2MA connectors are DPD2 connectors fitted with the LITTLE CAESAR® contact assembly for rear insertion, release, and extraction of crimp-type contacts. Contacts are inserted manually and removed using a disposable plastic tool. Like other models, the hard dielectric, closed-entry socket inserts include lead-in chamfers to ensure positive mating of pin contacts. DPD2 and DPD2MA connectors are fully intermateable.

Material Specifications

		DPD/DPD2	DPDMA/DPD2MA	DPD/DPDMA Specifications
Shell/Polarization Hardware	Material	Aluminum alloy		QQ-A-591/A380
	Finish	Natural cadmium plate		QQ-P-416

DPD/DPDMA

Engaging Devices

Engaging Devices - Single Gang DPD/DPDMA

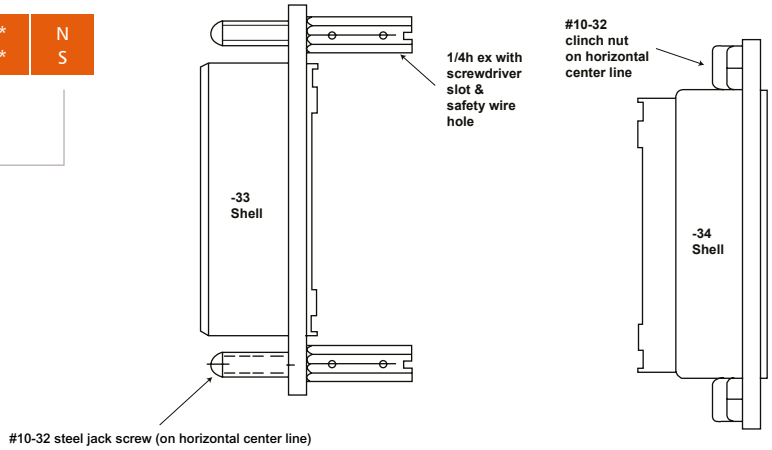

The DPD/DPDMA can be engaged by means of a No. 10-32 steel jack screw and clinch nut. This coupling device is designed to fasten connectors securely when they are used in other than standard Rack and Panel applications. The jack screws and clinch nuts are mounted on the shell flanges at the factory. These devices may be specified on either size 33 or size 34 shells; however, it is preferred to place the jack screws on the size 33 shell and the clinch nuts on the size 34 shell. They are available for both DPD and DPDMA connectors.

DPD/DPDMA

Polarization

DPD/DPDMA Polarization

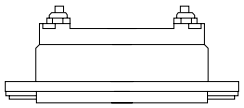

Shaded area indicates extended portion of polarizing post.

DPD connectors can be supplied with polarizing posts to provide six or more alternate positions. This prevents cross plugging where two identical connectors are mounted close together. Shells with polarizing posts can be ordered by adding the desired position to the part number; for example: DPD-12C4-34P-1A-POS. Y. Polarizing positions are shown below and are face view of the 33 (plug) shell.

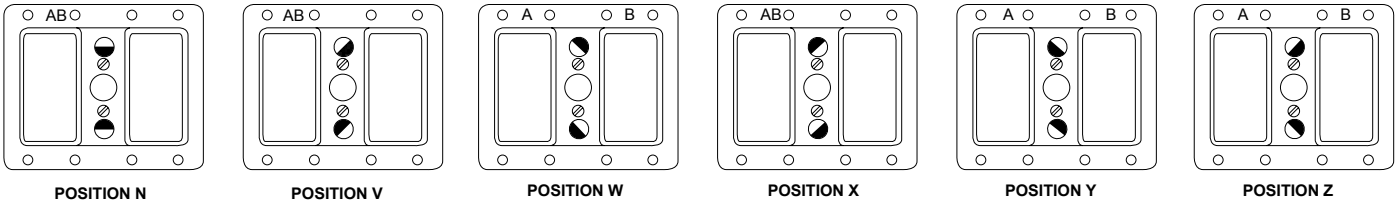

DPD 33 with POLARIZING POSTS

DPD 34 with POLARIZING KEYWAYS

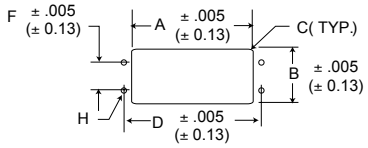

DPD2/DPD2MA Polarization

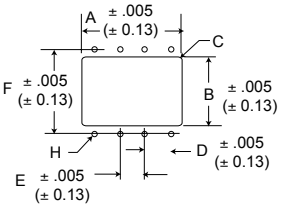

Shaded area indicates extended portion of polarizing post.

DPD2 series can be supplied with two polarizing posts to provide six or more alternate positions. This feature is designed to assist in preventing cross plugging. At present shells are modified upon request only, by adding the desired position to the part number; e.g., DPD2-156-34PM-Pos. V.
Polarizing positions shown are face view of 33 shell.

		1/2 (12.70)	6800 Volts

Stripping Instructions

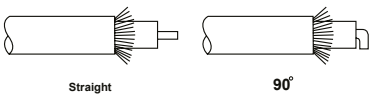

ITT Cannon recommends resistance soldering for all solder contacts, particularly for RF cable where excessive heat will damage the dielectric. Wires should be pre-tinned. Shells, bushings, endbells and junction shells (where applicable) must be slipped over wire bundles before soldering or crimping is started. The mechanical steps in wiring coaxials are described below.

R Coaxial (Straight and 90)

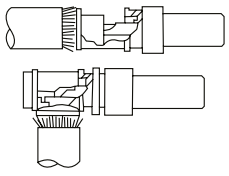

Step 1 - Cut cable even. Trim to dimensions shown on tabulation. Care should be taken not to injure the conductor or dielectric.

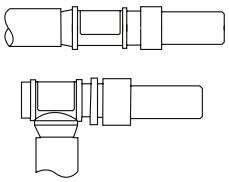

Step 2 - Comb braid, tin conductor and remove flux. If a 90˚ contact is used, bend conductor 90˚ after

Step 3 - Remove solder pot cover. Insert cable and solder conductor to contact. If a straight contact is used, the dielectric should but against contact solder pot.

Step 4 - Replace solder pot cover and solder braid to ferrule.

Coax Type	Cable Size	A	Trim B	C
Straight R Coax	RG-7/U	.171 (4.34)	.421 (10.69)	.515 (13.08)
	RG-59/U		.546 (13.87)	.671 (17.04)
	RG-62/U		.543 (13.87)	
90° angle R Coax	RG-7/U	.218 (5.54)	.312 (7.92)	.437 (11.10)
	RG-58/U		.531 (13.49)	.593 (15.06)
	RG-59/U			
	RG-62/U

About ITT Cannon

ITT is a diversified leading manufacturer of highly engineered critical components and customized technology solutions for the energy, transportation and industrial markets. Building on its heritage of innovation, ITT partners with its customers to deliver enduring solutions to the key industries that underpin our modern way of life. Founded in 1920, ITT is headquartered in Stamford, Connecticut, with employees in more than 35 countries and sales in a total of approximately 125 countries. For more information visit itt.com

ITT's Cannon brand offers a product portfolio that remains one of the most extensive in the industry. Continuous investment in technology, research and investment have enabled us to provide new, innovative solutions to markets including:

- **Commercial Aerospace**
- **Military & Defense**
- **Industrial**
- **Medical**

When you specify an ITT Cannon interconnect solution, you can depend on products that are designed, developed, and manufactured to the highest standards of quality and reliability. This tradition of excellence is rooted in ITT's corporate culture, which is built on the principles of Six Sigma.

At ITT, Six Sigma is more than a quality philosophy–it is a company-wide discipline that drives continuous improvement across every aspect of the business. Our Value-Based Management and Value-Based Product Development systems serve as key foundations, supporting the advancement of both leadership and engineering excellence.

Six Sigma Manufacturing

Cannon operates manufacturing facilities in the United States, Germany, Italy, Mexico, China, and Japan, all of which have particular product area strengths that allow ITT Cannon to offer a truly global presence to our customers. Our facilities are world class and accommodate full vertical integration, utilizing the latest manufacturing technologies including automated and robotic machining centers, Super Market manufacturing cells, Kanban pull systems, and automated electrical, mechanical, and optical test and inspection equipment. The combination of our manufacturing strength and our advanced manufacturing facilities allows Cannon to offer products at market driven prices. Our capabilities, especially in robotics, computerized precision tooling, Kaizen Project Management, Six Sigma tools and testing give Cannon the most optimized global manufacturing footprint in the interconnect industry.

The Custom Difference

As an industry leader in harsh environment interconnect applications, Cannon's world class engineering teams work directly with our customers to design and develop cost-effective solutions for their applications. In many cases we may modify one of our standard designs to ensure a highly reliable solution where timing is critical. When custom connectors are required, we collaborate with clients and partners with a goal to design the most reliable, cost-effective solution possible. Our engineering and product management teams provide a thorough analysis of proposed solutions, ensuring our customers receive the right solution for their program and application needs.

RoHS Compliance Information

Cannon has implemented a rigorous parts control plan across all its electronics manufacturing facilities worldwide, ensuring that the Cannon product portfolio meets the requirements of European Union Directive 2002/95/EC–commonly known as the Restriction of Hazardous Substances (RoHS) directive.

Where applicable, specific Cannon products may be ordered with an R-prefix part number, ensuring delivery of RoHS-compliant components for commercial electronics applications and equipment.

As most RoHS-restricted substances are related to metal plating and lead-based solder coatings, Cannon offers RoHS-compliant products with the following plating finishes: electroless nickel, stainless steel, anodized aluminum, and gold plating. For board-mount connectors, gold plating is recommended as the preferred alternative to traditional tin-lead solder finishes.

RoHS COMPLIANT PART NUMBERS

Product Safety Information

THIS NOTE MUST BE READ IN CONJUNCTION WITH THE PRODUCT DATA SHEET/CATALOG. FAILURE TO OBSERVE THE ADVICE IN THIS INFORMATION SHEET AND THE OPERATING CONDITIONS SPECIFIED IN THE PRODUCT DATA SHEET/ CATALOG COULD RESULT IN HAZARDOUS SITUATIONS.

1. MATERIAL CONTENT AND PHYSICAL FORM

Electrical connectors do not usually contain hazardous materials. They contain conducting and non-conducting materials and can be divided into two groups.
a) Printed circuit types and low cost audio types which employ all plastic insulators and casings.
b) Rugged, Fire Barrier and High Reliability types with metal casings and either natural rubber, synthetic rubber, plastic or glass insulating materials. Contact materials vary with type of connector and also application and are usually manufactured from either: Copper, copper alloys, nickel, alumel, chromel or steel. In special applications, other alloys may be specified.

2. FIRE CHARACTERISTICS AND ELECTRIC SHOCK HAZARD

There is no fire hazard when the connector is correctly wired and used within the specified parameters. Incorrect wiring or assembly of the connector or careless use of metal tools or conductive fluids, or transit damage to any of the component parts may cause electric shock or burns. Live circuits must not be broken by separating mated connectors as this may cause arcing, ionization and burning. Heat dissipation is greater at maximum resistance in a circuit. Hot spots may occur when resistance is raised locally by damage, e.g. cracked or deformed contacts, broken strands of wire. Local overheating may also result from the use of the incorrect application tools or from poor quality soldering or slack screw terminals. Overheating may occur if the ratings in the product Data Sheet/Catalog are exceeded and can cause breakdown of insulation and hence electric shock. If heating is allowed to continue it intensifies by further increasing the local resistance through loss of temper of spring contacts, formation of oxide film on contacts and wires and leakage currents through carbonization of insulation and tracking paths. Fire can then result in the presence of combustible materials and this may release noxious fumes. Overheating may not be visually apparent. Burns may result from touching overheated components.

3. HANDLING

Care must be taken to avoid damage
to any component parts of electrical connectors during installation and use. Although there are normally no sharp edges, care must be taken when handling certain components to avoid injury to fingers. Electrical connectors may be damaged in transit to the customers, and damage may result in creation of hazards. Products should therefore be examined prior to installation/use and rejected if found to be damaged.

4. DISPOSAL

Incineration of certain materials may release noxious or even toxic fumes.

5. APPLICATION

Connectors with exposed contacts should not be selected for use on the current supply side of an electrical circuit, because an electric shock could result from touching exposed contacts on an unmated connector. Voltages in excess of 30 V ac or 42.5 V dc are potentially hazardous and care should be taken to ensure that such voltages cannot be transmitted in any way to exposed metal parts of the connector body. The connector and wiring should be checked, before making live, to have no damage to metal parts or insulators, no solder blobs, loose strands, conducting lubricants, swarf, or any other undesired conducting particles. Circuit resistance and continuity check should be made to make certain that there are no high resistance joints or spurious conducting paths. Always use the correct application tools as specified in the Data Sheet/Catalog. Do not permit untrained personnel to wire, assemble or tamper with connectors. For operation voltage please see appropriate national regulations.

IMPORTANT GENERAL INFORMATION

(i) Air and creepage paths/Operating voltage. The admissible operating voltages depend on the individual applications and the valid national and other applicable safety regulations.
For this reason the air and creepage path data are only reference values. Observe reduction of air and creepage paths due to PC board and/or harnessing.

(ii) Temperature
All information given are temperature limits. The operation temperature depends on the individual application.

(iii) Other important information
Cannon continuously endeavors to improve their products. Therefore, Cannon products may deviate from the description, technical data and shape as shown in this catalog and data sheets.

All data subject to change without notice.

Connect with the experts

We deliver high performance, harsh environment interconnect solutions that enable the transfer of data, signal and power in an increasingly connected world.

Why ITT

ITT is a focused multi-industrial company that designs and manufactures highly engineered critical components and customized technology solutions. ITT's Cannon brand is a leading global manufacturer of connector products serving international customers in aerospace, defense, medical, industrial and transportation end markets. ITT's Connector business, which also includes the Veam and BIW Connector Systems brand, manufactures and supplies a variety of connectors and interconnects that make it possible to transfer data, signal and power in an increasingly connected world.
