DESCRIPTION

CM-1 is a low cost double balanced mixer offering excellent performance to 500 MHz in a miniature package. The performance/cost ratio of this mixer makes the application of advanced mixer technology available to equipment designers who previously were cost-restricted to compromise designs. The wide bandwidth, low conversion loss and outstanding isolation performance greatly simplifies the designer's task. Like all double balanced mixers it has multiple applications over the same wide bandwidth, such as phase detector, electronic attenuator and modulator.

The circuitry consists of four precisely matched Schottky diodes and two rugged transmission line transformers. Each CM-1 mixer is individually tested to SMDI's demanding quality and performance specifications.
