APPLICATION TOOLING BUSINESS PARTNERS

Quality Assurance You Can Trust

We recognize that reliable wire-to-product termination is critical for optimal performance and product reliability in your applications. To help ensure uninterrupted support for your operations, qualified application-tooling suppliers across multiple global locations can now support for select TE-qualified tooling.

These select application tooling are manufactured to the exact same crimp TE specifications as legacy TE tooling:

Identical crimp profiles to help ensure consistent performance

Same crimp standards and requirements for product reliability

Controlled critical variables including crimp height and crimp width per TE 114 (application specification) documents

Full compliance with agency requirements when following standards, such as UL and VDE.

Important Compliance Information

Please note: If tooling or termination equipment is used other than what is recommended by TE, where such tooling or equipment was not used for agency validation and/or the product qualification process, TE does not make any representation or warranty, expressed or implied, and disclaims any liability for non-performance per TE product specification. Customer accepts the sole responsibility for the evaluation, application, and use of the TE products in such circumstances.
