

SMT Common Mode Chokes

SLIC/Shasta Series

- Wide variety of package sizes available
- Current Rating:** 2.8Arms to 20Arms
- Inductances Range:** 94uH to 1.8mH
- Dielectric strength:** 1500Vrms

Electrical Specifications at 25° C Temp Range -40 ° C to 125 ° C

NOTE:

- The current rating (Irated) is based upon the temperature rise of the component and represents the rms current which will cause a typical temperature rise of 55C with 50LFM forced cooling
- The temperature of the component (ambient plus temperature rise) must be within the stated operating temperature range.
- Optional Tape & Reel packaging can be ordered by adding a "T" suffix to the part number (i.e. PM2741NL becomes PM2741NLT). Pulse complies to industry standard tape and reel specification EIA481.
- Inductance values shown are all nominal +/- 35% except those identified with an asterisk (*) which indicates that the inductance is a minimum value.
- Leakage inductance values as shown are the minimum value except those identified with an asterisk (*) which indicates the value shown is a typical value.
- The identified parts with the R10K cores have a 115°C upper operating temperature range limitation due to the core curie temperature
- The parts in regular font are completely automotive qualified i.e., AEC-Q200 qualified and launched on an IATF certified production line. The parts in bold font are considered AEC-Q200 compliant based on qualification testing of various designs in these platforms. However, the IATF launch per the Advanced Product Quality Planning (APQP) procedure has not been completed.
- Please contact Pulse Electronics if a part is selected for automotive application design to ensure APQP and PPAP delivery can be completed in accordance with project milestones. Note that Pulse applies standard AEC-Q200 qualification. If a customer has a vibration requirement beyond this, Pulse may not be able to confirm that requirement with this series. The customer should then consider to conduct their own qualification testing and/or glue the component to the PCB.

Please note that for PM2741NL and PM2742NL the part should be connected as follows:
Customer to connect pins (1,2) and (4,3) together on board to form a single winding (1,2-4,3).
Customer to connect pins (8,7) and (5,6) together on board to form a single winding (8,7-5,6)
All ratings (leakage and DCR) are with respect to the above winding configuration.
