

SS-P

Subminiature Basic Switch

SS Series Compatible Mounting with a Simple Construction and Easy-to-Use Design Concept

- One-piece terminal construction to keep out flux.
- A single leaf movable spring construction.
- Conforms to North American and European safety Standards.
- 1 mm MIN Contact Gap Models available for Interlock applications

RoHS Compliant

Characteristics

Item		Model	SS-3P models	SS-01P models	SS-3FP models
Permissible operating speed			0.1 mm to 1 m/s (for pin plunger models)		
Permissible operating frequency	Mechanical	300 operations/min			
	Electrical	30 operations/min			
Insulation resistance			100 MΩ min. (at 500 VDC with insulation tester)		
Contact resistance (initial value)			50 mΩ max.	100 mΩ max.	50 mΩ max.
Dielectric strength *1	Between terminals of the same polarity	1,000 VAC 50/60 Hz for 1 min			
	Between current-carrying metal parts and ground	1,500 VAC 50/60 Hz for 1 min			
	Between each terminals and non-current-carrying metal parts	1,500 VAC 50/60 Hz for 1 min			
Vibration resistance *2	Malfunction	10 to 55 Hz, 1.5 mm double amplitude			
Shock resistance	Durability	1,000 m/s² {approx. 100G} max.			
	Malfunction *2	300 m/s² {approx. 30G} max.			
Durability *3	Mechanical	1,000,000 operations min. (60 operations/min)			100,000 operations min. (60 operations/min)
	Electrical	70,000 operations min. (20 operations/min, 125 VAC)	200,000 operations min. (20 operations/min)	100,000 operations min. (20 operations/min, 30 VDC)	
		100,000 operations min. (20 operations/min, 30 VDC)			
Degree of protection			IEC IP40		
Degree of protection against electric shock			Class I		
Ambient operating temperature			-25°C to +85°C (at ambient humidity of 60% max.) (with no icing or condensation)		
Ambient operating humidity			85% max. (for +5 to +35°C)		
Weight			Approx. 1.6 g (pin plunger models)		

Note. The data given above are initial values.

*1. The values for dielectric strength shown are for models with a Separator (refer to "Micro Switch Common Accessories").

*2. The values are at Free Position and Total Travel Position values for pin plunger, and Total Travel Position value for lever. Close or open circuit of the contact is 1 ms max.

*3. For testing conditions, consult your OMRON sales representative.

Precautions

★Please refer to "Common Precautions" for correct use.

Cautions

●Soldering

• Connecting to Solder Terminals

Complete the soldering at the iron tip temperature of 350 to 400°C within 5 seconds, and do not apply any external force for 1 minute after soldering. Soldering at an excessively high temperature or soldering for more than 5 seconds may deteriorate the characteristics of the Switch.

• Connecting to PCB terminals

When using automatic soldering baths, we recommend soldering at 260±5°C within 5 seconds. Make sure that the liquid surface of the solder does not flow over the edge of the board.

When soldering terminals manually, complete the soldering at the iron tip temperature between 350 to 400°C within 3 seconds, and do not apply any external force for 1 minute after soldering. When applying solder, keep the solder away from the case of the Switch and do not allow solder or flux to flow into the case.

Correct Use

●Mounting

Use M2.3 mounting screw with plane washers or spring washers to securely mount the Switch. Tighten the screws to a torque of 0.23 to 0.26 N·m {2.3 to 2.7 kgf·cm}.

●Using Micro Loads

Using a model for ordinary loads to open or close the contact of a micro load circuit may result in faulty contact. Use models that operate in the following range. However, even when using micro load models within the following operating range, if inrush current occurs when the contact is opened or closed, it may increase the contact wear and so decrease durability. Therefore, insert a contact protection circuit where necessary. The N-level reference value applies for the minimum applicable load. This value indicates the malfunction reference level for the reliability level of 60% (λ_{60}).

(JIS C5003)

The equation, $\lambda_{60}=0.5 \times 10^{-6} / \text{operation}$ indicates that the estimated malfunction rate is less than $\frac{1}{2,000,000}$ operations with a reliability level of 60%.
